

STAFF REPORT FOR PLANNING COMMISSION MEETING OF JANUARY 28, 2015

FILE NO: ZMA-14-161

AGENDA ITEM: F-3 (A)

STAFF AUTHOR: Kathe Green, Assistant Planner

REQUEST: To recommend to the Board of Supervisors approval of a Zoning Map Amendment to change the zoning of property located at 1001 Mountain St. and 608 and 610 W. Washington St., from Public Community (PC) to Multi-Family Apartment (MFA).

APPLICANT: Carson-Tahoe Hospital

OWNER: Carson-Tahoe Hospital

LOCATION: 1001 Mountain Street, 608 and 610 West Washington Street

APNs: 001-201-15, -16, -26, and -27

RECOMMENDED MOTION: "I move to recommend to the Board of Supervisors approval of ZMA-14-161, a Zoning Map Amendment to change the zoning of APNs 001-201-15, -16, -26 and -27 from Public Community to Multi-Family Apartment on property located at 1001 Mountain Street, 608 and 610 West Washington Street, based on the findings contained in the staff report."

EXISTING ZONING

PROPOSED ZONING

SURROUNDING AREA USES MAP

SURROUNDING AREA MASTER PLAN MAP

LEGAL REQUIREMENTS: CCMC 18.02.050 (Review) and 18.02.075 (Zoning Map Amendments)

MASTER PLAN DESIGNATION: Mixed-Use Residential (MUR)

CURRENT ZONING: Public Community (PC)

PROPOSED ZONING: Multi-Family Apartment (MFA)

SURROUNDING LAND USE AND ZONING:

NORTH: Public Regional/former Carson-Tahoe Hospital, now medical and professional offices
SOUTH: Residential Office and Single Family 6,000/ residences and offices
EAST: Residential Office/residences, offices, child care business, multi-family
WEST: Residential Office and Single Family 6,000/offices and residences

ENVIRONMENTAL INFORMATION:

FLOOD ZONE: Zones AO –100 year flood plain, 1-3 foot depth average
SLOPE/DRAINAGE: Primarily flat
EARTHQUAKE: Within 500 feet, moderate earthquake potential, zone II

KEY ISSUE:

Would this Zoning Map Amendment change be consistent with the Carson City Master Plan and surrounding uses?

BACKGROUND:

The subject site was previously developed as medical and professional offices in three multi-story buildings which were constructed starting in 1975. All of the structures on this site were demolished in 2012 and the property has since remained undeveloped. In July of 2014 the Planning Division completed a Major Project Review of proposed project to allow the construction of a Skilled Nursing and Memory Care/Rehabilitation Outpatient Center/Congregate Care Housing Facility on site. At that time, staff recommended a Zoning Map Amendment to Multi-Family Apartment for the proposed project because that zoning district would be more in line with the current Master Plan designation of Mixed-Use Residential than a commercial zoning district. Congregate Care Housing facilities are allowed with a Special Use Permit in the Multi-Family Apartment zoning district.

DISCUSSION:

The subject parcels are currently zoned Public Community (PC). The subject site is surrounded by properties zoned Residential Office, Public Regional and Single Family 6,000 and is located south of the building used as the former Carson Tahoe Hospital, east of property which is zoned Residential Office, north of property zoned Single Family 6,000 and Residential Office and on the west is adjacent to property zoned Residential Office and across the street from property zoned Single Family 6,000.

The applicant is proposing development of a new Congregate Care Housing/ Skilled Nursing/ Memory Care/Outpatient Rehabilitation Facility. The change of zoning to Multi-Family Apartment would allow this as a conditional use and is concurrently under review under a separate Special Use Permit.

Approval of the proposed application would result in the parcel being re-zoned from Public Community to Multi-Family Apartment and would be compatible with the surrounding zoning and master plan.

The property has previously been used a medical and professional offices in multi-story buildings. The proposed change of zoning would allow the continuation of multi-story buildings, while allowing the proposed congregate care housing project as a conditional use on the site. The proposed congregate care housing use is concurrently under review. The current Master Plan designation of the area as Mixed Use Residential, which allows 3-36 dwelling uses per acre, supports the proposed zoning change as well. The location of the area of the proposed zone change is surrounded by parcels where professional, medical and office uses are located, while residential uses are across streets surrounding the area of proposed change of zoning.

PUBLIC COMMENTS: Public notices were mailed to 58 adjacent property owners within 300 feet of the subject parcel in accordance with the provisions of NRS and CCMC 18.02.045. As of January 15, 2015, one written comment in support of the concurrent review of the Zone Change, Growth Management and Special Use Permit applications has been received. One phone comment was received on January 19, 2015 in opposition of the Zone Change. Any comments that are received after this report is completed will be submitted prior to or at the Planning Commission meeting, depending on their submittal date to the Planning Division.

OTHER CITY DEPARTMENT OR OUTSIDE AGENCY COMMENTS:

Engineering Division:

1. CCMC 18.02.080 (5d) - Public Services. Public sewer and water are available at this site but may need improvements to ensure adequate water and fire flows.

Health Department: No concerns.

Building Division:

1. All projects and improvements must be performed in accordance with Nevada State Revised Statutes (NRS) 624 and Carson City Municipal Ordinance (CCMC) 15.05.020.
2. Repairs, Replacement, and Alterations must comply with 2012 International Building Codes, 2012 Uniform Plumbing Code or 2012 International Plumbing Code, Uniform Mechanical Code or 2012 International Mechanical Code, 2012 Fuel Gas Code, 2011 Electrical Code, and 2012 Northern Nevada Amendments.
3. All Contractors are required to carry State and local licenses.

Fire Department: No concerns

Environmental Health Department: No concerns

Comments from the public:

Kent and Liz Skogerson, property owners on Washington Street:

I would like to provide our support for the measures offered on the notice, zoning amendment, special use permit and growth management.

Jim Menath, 800 W. Washington St:

We are highly opposed to any rezoning of the property, particularly to high density or multi-family use, or the potential future multi-family use of the property. The Board recently approved multi-family use for a property at 812 N. Division near this project in an area that has never had apartments on it before.

We used to be able to deal with the City easily. The hospital proposed a high rise parking facility near our property and then proposed expansion on the Anderson Ranch across Mountain Street from their current facility. Both were shot down by the residents, which is why the hospital moved.

All Carson-Tahoe Hospital is interested in is being a profit-making non-profit.

FINDINGS: Staff recommends the following findings for approval pursuant to the Carson City Municipal Code Section 18.02.075(5), Zoning Map Amendments and further substantiated in the applicant's written justification.

1. The proposed amendment is in substantial compliance with the goals, policies and action programs of the Master Plan.

The proposed amendment meets the intent of the Mixed-Use Residential Master Plan designation for the subject property as detailed in the staff report discussion. Multi-Family Apartment zoning is an appropriate zoning district for the Mixed-Use Residential Master Plan.

The existing land use designation of Mixed-Use Residential (MUR) is consistent with the future development of the site as a Congregate Care Housing Facility, which is a conditional use in the Multi-Family Apartment zoning district and is appropriate under the Carson City Master Plan, which identifies the following uses in the Mixed-Use Residential Master Plan section of the code:

- *Primary Uses:* A range of medium to high-density residential housing types, such as small lot single-family residences, duplexes, patio homes, townhomes, apartments, condominiums, and live-work units.
- *Secondary Uses:* Convenience retail and services such as supermarkets, restaurants, drugstores, smaller specialty shops, retail, health services, professional offices, and civic uses. Open space, parks, pathways, schools, and other public uses are also appropriate.

Chapter 3: A Balanced Land Use Pattern

Establishing a balance of land uses within the community promotes vitality and long-term economic stability. A balanced community is able to provide employment opportunities for its residents as well as a diverse choice of housing, recreational opportunities, and retail services. Carson City strives to maintain its strong employment base and extensive network of public lands while increasing housing options and the availability of retail services to serve residents of the City and surrounding growth areas.

Promote mixed-use at a variety of scales and intensities – There is a larger-scale professional and medical office use adjacent to the site to the north which was the former Carson-Tahoe Hospital. The surrounding property is a mix of office and residential uses. The subject property was formerly used as three, multi-story office buildings.

Promote mixed-use development patterns as appropriate for the surrounding context consistent with the land use descriptions – The Congregate Care Facility is proposed adjacent to the former Carson-Tahoe Hospital to the north, professional and medical office uses in the immediate vicinity, as well as existing single family and multi-family residential uses.

Discourage rezoning that creates “friction zones” – The proposed Multi-Family Apartment zoning district is consistent with adjacent medical and professional office uses, and surrounding residential and office uses. The location of the proposed zone change is in an area surrounded by professional, medical and office uses, with single family residential uses being located across the surrounding streets. This area was previously developed with multi-story buildings and associated traffic and parking in support of those uses on this site. This zoning would continue to allow the same level of development on the site as was previously located here.

Provide zoning consistent with the Land Use designation and table – Medium and High Density residential uses are listed as a “primary use” in the Mixed Use Residential category.

Meet the location criteria for the applicable Land Use – The subject site is located on two urban minor collectors, Mountain Street and Washington Street and would be consistent with the Mixed Use Residential land use description.

Chapter 5: Economic Vitality

Carson City derives its overall health and economic success from its ability to maintain a strong and diverse base of jobs, to provide a supply of varied housing choices for its employees, to provide a range of services and recreational opportunities for residents and visitors, and to generate tourism through the promotion of its unique characteristics and historic amenities. In addition, creating appropriate provisions for residents who need care in the event of declining health is a reality that would be addressed by the expansion of appropriate congregate care housing. The Master Plan promotes the continued enhancement of the Downtown and surrounding residential neighborhoods as the focus of the community.

The proposed zoning map amendment will help maintain and enhance the primary job base – The proposed congregate care/skilled nursing/memory care/outpatient rehabilitation facility is a source of potential employment within this area which is a mix of professional, medical, office and residential uses.

Chapter 6: Livable Neighborhoods and Activity Center

Carson City strives to be a city known for its safe, attractive and diverse neighborhoods, compact mixed-use activity centers, and its vibrant, pedestrian-friendly Downtown. Access to parks, pathways, open space, and recreational facilities will be emphasized and the incorporation of thoughtful design and site planning techniques will be encouraged in all development. New commercial development will be focused in pedestrian-friendly, mixed-use activity centers located along major thoroughfares where they will be readily accessible to surrounding neighborhoods and may ultimately be served by transit. New higher-density housing will be encouraged as part of the overall land use mix along the City's major gateway corridors and within the Downtown area to provide a more diverse selection of housing types and price ranges for residents within walking distance of the City's primary job and activity center.

The proposed zoning map amendment will promote compatibility with surrounding development for infill projects or adjacent to existing neighborhoods. The proposed Congregate Care Facility use is consistent within the vicinity of medical, office, commercial and residential uses, is located on two minor urban arterials, and is of a compatible scale, character and density with the proposed, surrounding and former uses on the site.

- 2. The proposed amendment will provide for land uses compatible with existing adjacent land uses and will not have detrimental impacts to other properties in the vicinity.**

The proposed amendment will provide for zoning that is compatible with existing and planned future uses on this and adjacent properties. Changing the zoning from Public Community to Multi-Family Apartment will allow the development of the site in a manner compatible with surrounding uses.

The purpose of the Multi-Family Apartment District is to promote the development of a variety of multi-family units such as duplexes, townhouses and high density apartments as well as Congregate Care Housing with approval of a Special Use Permit. The Multi-Family Apartment District is consistent with the policies of the Mixed-Use Residential category of the Master Plan.

The proposed amendment is compatible with the current zoning and uses of the property to the north (professional offices and medical uses, former site of Carson-Tahoe Hospital) and east (commercial, residential and multi-family residential uses). To the west and south are residential uses. The proposed zoning is central to the large block formed by Fleischmann Way on the north, Mountain Street on the west, Minnesota Street on the East and Washington Street on the south. Existing residential uses are all across the streets from the area under review. The proposal to allow multi-family apartment zoning in this central area would be contiguous to the professional, medical and office uses in this area.

- 3. The proposed amendment will not negatively impact existing or planned public services or facilities and will not adversely impact the public health, safety and welfare.**

as a result of the former development of the site with commercial uses and all public utilities are on site. Tom Grundy, P.E with Carson City has stated that the City can adequately supply this water use with expected improvements to the existing system.

The impacts of the proposed amendment on existing or planned public services or facilities to allow the modification of the use of the site from commercial to residential uses or to allow congregate care housing as a conditional use are minimal when compared with the previous commercial use of the site. The proposed amendment is anticipated to have no adverse impact on the public health, safety or welfare.

Adequate water, sewer, road, and storm drainage facilities exist to serve any proposed development of the site. The facility will be required to meet all requirements of the Fire, Police, Building, Engineering and Planning Departments.

The adjacent streets are adequate to handle existing development as well as any anticipated future development allowed within the requested zoning and commercial development.

4. That sufficient consideration has been exercised by the applicant in adapting the project to existing improvements in the area.

The existing drainage in the area is adequate and accommodated by the existing system. The proposed project would be an 86,500 square foot Congregate Care Housing Facility. There are existing utilities including water supplying the property. The site is concurrently under review for Growth Management for a proposed use of more than 7,500 gallons of water per day.

The proposed Zoning Map Amendment is not anticipated to increase the traffic density any more than the current Public Community zoning, due to the fact that this project replaces another large medical office use on the same site. Street improvements exist on Mountain, Washington and Minnesota Streets. The Engineering Division has noted that the adjacent streets are adequate to handle existing development as well as any anticipated development allowed per the zoning requested, although the public sewer and water facilities at this location may need improvements to ensure adequate water and fire flows. This concern will be addressed through the Special Use Permit process and in the Building Permit review.

The applicant has provided a conceptual plan for the future use on site, has concurrently submitted a request for a Special Use Permit approval of the proposed use of Congregate Care Housing Facility on the site, which is similar to the former use of the site as medical/professional offices. The site remaining vacant is not the highest and best use of the property.

BILL NO. ____

ORDINANCE NO. 2015- _____

AN ORDINANCE TO CHANGE THE ZONING OF PROPERTY LOCATED AT 1001 MOUNTAIN STREET, 608 AND 610 WEST WASHINGTON STREET, APNS 001-201-15, -16, -26 AND -27 FROM PUBLIC COMMUNITY (PC) TO MULTI-FAMILY APARTMENT (MFA).

Fiscal Effect: None

THE CARSON CITY BOARD OF SUPERVISORS DOES ORDAIN:

SECTION I:

An application for a Zoning Map Amendment on Assessor's Parcel Numbers 001-201-15, -16, -26 and -27, property owned by Carson-Tahoe Hospital located at 1001 Mountain Street, 608 and 610 West Washington Street, was duly submitted by the Carson City Planning Division in accordance with Section 18.02.075, et seq. of the Carson City Municipal Code (CCMC). The request will result in the zoning designation of property located at 1001 Mountain Street, 608 and 610 West Washington Street, APNs 001-201-15, -16, -26 and -27, changing from Public Community (PC) to Multi-Family Apartment (MFA). After proper noticing pursuant to NRS 278 and CCMC Title 18, on January 9, 2015, the Planning Commission, during a public hearing, reviewed the Planning Division staff report, took public comment and voted ____ ayes and ____ nays to recommend to the Board of Supervisors approval of the Zoning Map Amendment.

SECTION II:

Based on the findings that the Zoning Map Amendment would be in substantial compliance with the goals, policies and action programs of the Master Plan, that the amendment will provide for land uses compatible with existing adjacent land uses and

will not have detrimental impacts to other properties in the vicinity, that the Amendment will not negatively impact existing or planned public services or facilities and will not adversely impact the public health, safety and welfare, and that the request satisfied all other requirements for findings of fact enumerated in CCMC Section 18.02.075(5), the zoning map of Carson City is amended, changing the zoning of property located at 1001 Mountain Street, 608 and 610 West Washington Street, APNs 001-201-15, -16, -26 and -27, from Public Community (PC) to Multi-Family Apartment (MFA) as shown on "Exhibit A" attached.

PROPOSED this _____ day of _____, 2015.

PROPOSED BY Supervisor _____

PASSED on the _____ day of _____, 2015.

VOTE: AYES:

NAYS:

ABSENT:

ROBERT L. CROWELL, Mayor

ATTEST:

SUE MERRIWETHER, Clerk-Recorder

This ordinance shall be in force and effect from and after the _____ of _____, 2015

JAN 13 2015

CARSON CITY
PLANNING DIVISION

**Engineering Division
Planning Commission Report
File Number ZMA 14-161**

TO: Planning Commission

FROM: Rory Hogen, E.I.

DATE: Jan. 12, 2015

MEETING DATE: Jan. 28, 2015

SUBJECT TITLE:

Action to consider a change in zoning for parcels 01-201-15, 16, 26 and 27 at 1001 Mountain St. from Public Community to Multi-Family Apartment.

RECOMMENDATION:

The Engineering Division has no preference or objection to the zoning change requested. Information submitted with the application has demonstrated that infrastructure can support the request within standard development practices.

DISCUSSION:

The Engineering Division has reviewed the request within our areas of purview relative to adopted standards and practices and to the provisions of CCMC 18.02.075, Change of Land Use District and Code Amendments. The following discussion is offered.

CCMC 18.02.080(2a) - Adequate Plans

The information submitted by the applicant is adequate for this analysis.

CCMC 18.02.080 (5c) - Traffic/Pedestrians

The adjacent streets are adequate to handle existing development as well as any anticipated future development allowed within the requested zoning.

CCMC 18.02.080 (5d) - Public Services

Public sewer and water are available at this site but may need improvements to ensure adequate water and fire flows.

PROJECT LOCATION

The proposed project site consists of four (4) parcels (APN 001-201-15, 16, 26 & 27) totaling +/- 4.94 acres and is located north of West Washington Street, east of Mountain Street, south of Fleischmann Way, and west of North Minnesota Street.

Figure 1: Project Location (<http://ccapps.org/publicgis/>)

EXISTING SITE CONDITIONS

The proposed project site has a current master plan designation of Mixed Use Residential and a current zoning designation of Public Community with a portion of the site included within the Carson City Historic District.

Although currently vacant, the proposed project site, recently contained three (3) multi-story medical office buildings and their associated parking. These buildings were raised in order to allow for redevelopment of the site in a manner consistent with the proposed project.

Portions of the proposed project site currently reside in the AO Flood Zone as designated by FEMA FIRM Maps. It is anticipated that these portions of the site will require a Conditional Letter of Map Revision based on Fill (CLOMR-F) to remove the area containing the proposed building footprint from the Special Flood Hazard Area (SFHA). This application to the Federal Emergency Management Agency (FEMA) will be based on the proposed structure being constructed above flood elevations by placement of fill.

APPLICATION REQUEST

As discussed in the Major Project Review (MPR-14-042) Carson Tahoe Hospital is requesting the following:

- A **Zoning Map Amendment** to change the existing zoning designation from Public Community (PC) to Multi-Family Apartment (MFA)
- A **Special Use Permit** to allow for the desired land use of a Congregate Care Facility, and
- A **Growth Management Permit** for estimated consumption of average daily water in excess of 7,500 gallons per day (GPD)

This document contains the support for these requests with the specific applications included in Appendix A.

Figure 4: Proposed Zoning Designation

PROJECT DESCRIPTION

The Carson Tahoe Prestige Care Facility will provide a +/- 86,500 square foot state of the art Skilled Nursing, Memory Care and Rehabilitation Facility. The Memory Care portion will offer a total of 52 beds (42 semi-private and 10 private beds) and the Skilled Nursing portion will consist of a total of 80 beds (56 shared and 24 private beds). The Rehabilitation Facility and associated common areas will make up approximately 17,800 square feet of the building.

Table 2: Project Statistics

Total Site Area	+/- 4.94 Acres
Total Building Area	+/- 1.21 Acres
Total Landscaped Area	+/- 1.84 Acres
Total Hardscape Area	+/- 1.88 Acres

SITE PLAN

A reduced Site Plan is shown in Figure 5 for reference. A full size version of the site plan is located in Appendix B.

Figure 5: Site Plan

BUILDING

The proposed project is to be a +/- 86,500 square foot memory care and skilled nursing facility with an outpatient rehabilitation center. The memory care portion will be a two story wood frame wing. The two story skilled nursing wing will be type 2 construction (non- combustible), and the rehabilitation and common area portions of the structure will be one story wood frame construction.

Although the building footprint is relatively large, the goal of the design team is to create a residential scale and style structure. The main entry portion of the building will be one story while the resident wings will be two stories. The building will step up from the front entry view to decrease the visual impact of the volume. The resident rooms step in and out on the exterior further breaking up the mass. The exterior materials will also aid in creating the visual impression of a residential structure. Asphalt roof shingles, lap siding with stone veneer accents. There will be several exterior garden areas that will serve the residents as well as soften the exterior.

Although it is anticipated that outdoor lighting will ultimately be part of the proposed project, a detailed lighting plan is not included as part of this submittal package. Any lighting associated with the proposed development will be in accordance with Carson City Municipal Code Development Standards Lighting Section 1.3

PRELIMINARY RENDERING AND BUILDING MASSING

The building rendering and massing are preliminary in nature and are intended to demonstrate building scale and general building appearance.

Figure 6: South Rendering

Figure 7: East Massing

Figure 8: West Massing

Figure 9: North Massing

LANDSCAPE

The Preliminary landscape plan is as shown in Figure 10 a complete Preliminary Landscape Plan can found as part of Appendix B. Where trees exist in proposed landscape areas they will be preserved as feasible, dependent on final grading elevations and pending evaluation by a Certified Arborist.

Figure 10: Concept Landscape Plan

HYDROLOGY – STORM DRAINAGE

The Preliminary Hydrologic Drainage Study contained herein as Appendix E details the existing and proposed on and off-site drainage conditions. The conclusions of the Preliminary Study state, “The performance of the proposed project improvements, roadways, detention/retention, and storm water conveyance facilities, once constructed, will not adversely impact upstream or downstream properties adjacent to this site. The development of this site for the uses proposed will not significantly increase upstream or downstream storm flow runoff rates, volumes, velocities, depths, and will not influence floodplain boundaries.”

WATER SUPPLY

The existing water system surrounding the subject property consists of predominantly 6” and 8” waterlines, generally beneath adjacent roadways. This grid configuration should be able to adequately supply the proposed development without adversely impacting existing services. The existing water lines are shown in Figure 11. The estimated water demand would be supplied with a 4” main and 3” meter.

Figure 11: Existing Water Infrastructure

Based upon comparable health care facilities, the anticipated water usage is ~+/-19,280 gallons per day (GPD). Summary of the numbers used for estimation is included in Table 3 and water usage data is provide in Appendix D.

Table 3: Water Demand Calculations

Facility	# of Beds	GPD/Bed	Total GPD
Memory Care	52	90	4,680
Skilled Nursing	80	120	9,600
Landscape Water Use			2,000
Kitchen and Commercial Fixtures			3,000
Total			19,280

SEWER IMPACT

The existing sewer system surrounding the subject property consists of predominantly 8"-12" sewer lines, generally beneath adjacent roadways. This configuration should be able to adequately support the proposed development without adversely impacting existing services. The existing infrastructure is shown in Figure 12.

Figure 12: Sewer Infrastructure

Sewer discharges are generally not outfitted with a meter to determine actual sewer generation. It is anticipated that the proposed Carson Hospital Prestige Care Facility will produce an estimated sewer generation equal to that of the non-landscaped estimated water usage or +/- 17,280 GPD.

PARKING

Carson City Code requires 79 parking spaces and 96 spaces will be provided. Calculations for parking requirements are summarized in Table 4.

Table 4: Parking Calculations

Congregate Care Housing/Senior Citizen Home			
Carson City Code Required	Facility Count	Required Stalls	Provided Stalls
1 space per 5 Beds	132 Beds	27	27
1 space per 3 Employees	155 Employees	52	69
	Total	79	96*
* The parking number includes the stalls associated with the restriping of the southeastern entrance			

TRAFFIC

The Carson Tahoe Hospital Prestige Care Facility will consist of two primary land uses, Skilled Nursing and Memory Care, these land uses are best associated with of the following three (3) ITE Land Use Categories; Congregate Care Facility, Assisted Living Facility, and Nursing Home. All three of these Land Use Categories have very low trip generation rates, yielding anywhere between 22 and 29 peak hour trips based upon the proposed 132 bed facility. These estimated trip generation rates are far below the 80 peak hour trips required to trigger a traffic study per Carson City municipal Code.

ZONING MAP AMENDMENT GENERAL REVIEW QUESTIONS

- 1) That the proposed amendment is in substantial compliance with and supports the goals and policies of the Master Plan.**

- a) In reviewing the attached Carson City Master Plan Policy Checklist, determine which Policies are applicable to the proposal. Explain what features of the proposed project support your selection of Goals and Policies concerning land use and related policies for the neighborhood where the subject project is located.**

The property is in the Carson City Redevelopment Area #1 making it a priority infill development area. The Carson City Master Plan also defines this parcel as Mixed-Use Residential with a primary use listed as a range of medium to high-density residential housing and a secondary use listed as health services. A change to Multi-Family Apartment zone will align with these goals without creating any “friction zones” as the surrounding properties are predominantly medical office buildings. This zone change also aligns with the Master Plan goal to encourage the incorporation of additional housing in and around downtown.

- 2) That the proposed amendment will provide for land uses compatible with existing adjacent land uses and will not have detrimental impacts to other properties in the vicinity.**

- a) Describe the land uses and zoning adjoining your property (for example: North: two houses, Single-Family One Acre zoning; East: restaurant, Retail Commercial zoning, etc.), and how your zoning will be compatible with those uses and not cause detrimental impacts.**

North: Carson Tahoe Health Foundation, formerly Carson-Tahoe Hospital zoned Public Regional (PR), current land use is a medical facility; East: Residential Office (RO) zoning, current land use is medical office, residential; South: Residential Office (RO) zoning, current land use is medical office, residential; West: Residential Office (RO) zoning, current land use is medical office, residential. The proposed zoning designation of MFA is consistent with the surrounding properties existing residential and office designations. In addition, the allowed uses of the proposed MFA designation are in line with the current adjacent land uses.

- b) Describe land use and zoning changes in the general vicinity which have occurred in the previous five-year period.**

Although currently vacant, the proposed project site, recently contained three (3) multi-story medical office buildings and their associated parking. These building were raised in order to allow for redevelopment of the site in a manner consistent with the proposed project.

- c) That the proposed amendment will not negatively impact existing or planned public services or facilities and will not adversely impact the public health, safety and welfare.**

Due to the similarity of the project to the surrounding properties, the general neighborhood will see a similar type of clientele that currently frequents the area and there will not be a negative impact on the surrounding properties. At build out there will not be any discernable changes in noise, dust, odors, vibration, fumes, glare, or physical activity than was seen with previous uses. All project uses will be contained within the building. Standard construction dust control practices will be used during construction.

- d) That sufficient consideration has been exercised by the applicant in adapting the project to existing improvements in the area. Be sure to indicate the source of the information that you are providing (private engineer, development engineering, title report, or other sources). Describe how your proposed Zoning Map Amendment will not adversely impact drainage, sewer, water, traffic, schools, emergency services, roadways and other city services.**

The information provided is a collaboration between Manhard Consulting, LRS Architecture and Sandra Wendel and Associates. It is in compliance with Carson City Municipal Code, NAC and NRS. Requirements from Major Project Review MPR-14-042 are met. Our proposed Zoning Map Amendment will not adversely impact the following; drainage, sewer, water, traffic, schools, emergency services, roadways and other city services.

The development of this site for the uses proposed will not significantly increase upstream or downstream storm flow runoff rates, volumes, velocities, depths, and will not influence floodplain boundaries. Based upon comparable health care facilities, the anticipated water usage is ~+/- 19,280 gallons per day (GPD), which will not impact existing services. Traffic estimated trip generation rates are far below the 80 peak hour trips required to trigger a traffic study per Carson City Municipal Code. Adequate means of access are available for emergency vehicles to serve the site. There is a fire station located roughly three quarters of a mile away from the development with an estimated emergency vehicle response time of 3 to 5 minutes.

- e) Is drainage adequate in the area to support the density that may occur with the rezoning? How will drainage be accommodated? How have you arrived at this conclusion?**

The development of this site for the uses proposed will not significantly increase upstream or downstream storm flow runoff rates, volumes, velocities, depths, and will not influence floodplain boundaries. See Hydrology – Preliminary Hydrologic Drainage Study in Appendix C.

- f) Are the water supplies in the area of your project adequate to meet your needs without degrading supply and quality to others? Is there adequate water pressure? Are the lines in need of replacement? Talk to the Utilities Department for the required information.**

The water supplies in the area of our project are adequate to meet the needs without degrading supply and quality to others. There is adequate water pressure and existing water lines are in satisfactory working condition.

- g) Are roadways sufficient in the area to serve the density that may occur from the rezoning? How have you arrived at this conclusion?**

Roadways in the area are sufficient to serve the density that will occur from the rezoning. The estimated vehicular trip generation of between 22 and 29 peak hour trips are far below the 80 peak hour trips required to trigger a traffic study per Carson City Municipal Code.

- h) Will the school district be able to serve the student population that may occur from the rezoning? How have you arrived at this conclusion?**

Due to the nature of the proposed project the school district will not be affected from the request.

- i) Are adequate means of access available for emergency vehicles to serve the site? What is the approximate response time for emergency vehicles? If your application is approved to rezone the property, will additional means of access be required for increased density? Or will existing access ways be adequate? How have you arrived at this conclusion?**

Adequate means of access are available for emergency vehicles to serve the site. There is a fire station located roughly three quarters of a mile away from the development with an estimated emergency vehicle response time of 3 to 5 minutes.

ACKNOWLEDGMENT OF APPLICATION

I certify that the foregoing statements are true and correct to the best of my knowledge and belief.

Applicant

Date

SPECIAL USE PERMIT GENERAL REVIEW QUESTIONS

Question 1. How will the proposed development further and be in keeping with, and not contrary to, the goals of the Master Plan Elements?

Explanation A. Turn to the Master Plan Policy Checklist. The Master Plan Policy Checklist for Special Use Permits and Major Project Reviews address five items that appear in the Carson City Master Plan. Each theme looks at how a proposed development can help achieve the goals of the Carson City Master Plan. Address each theme; a check indicates that the proposed development meets the applicable Master Plan Policy. In your own words provide written support of the policy statement. You may want to acquire a free CD or purchase a paper copy of the Master Plan from the Planning Division, or review the copy in the Planning Office or in the reference section of the Ormsby Public Library on Roop Street, or use our website at www.carson.org

The proposed project helps to achieve A Balanced Land Use Pattern in that the proposed project site is located in a priority infill area. The proposed site plan incorporates for the protection of mature trees as appropriate. In addition, the proposed use provides for levels of service consistent with the land use designation.

The proposed project will contribute to the Economic Vitality of Carson City by encouraging a citywide housing mix consistent with the labor force and non-labor force populations.

The proposed project will contribute to Carson City's goal of providing Livable Neighborhoods and Activity Centers by using durable, long lasting building materials and providing a variety of visual interest through the incorporation of well-articulated building facades, clearly identified entrances and pedestrian connections, landscaping and other features consistent with the development standards. In addition, the proposed building is designed with the appropriate height, density and setback transitions and connectivity to the surrounding development to ensure compatibility.

Question 2. Will the effect of the proposed development be detrimental to the immediate vicinity? To the general neighborhood?

Explanation A. Describe the general types of land uses and zoning designations adjoining your property

North: Carson Tahoe Health Foundation, formerly Carson-Tahoe Hospital zoned Public Regional (PR), current land use is a medical facility; East: Residential Office (RO) zoning, current land use is medical office, residential; South: Residential Office (RO) zoning, current land use is medical office, residential; West: Residential Office (RO) zoning, current land use is medical office, residential. The proposed zoning designation of MFA is consistent with the surrounding properties existing residential and office designations. In addition, the allowed uses of the proposed MFA designation are in line with the current adjacent land uses.

- B. Explain why your project is similar to existing development in the neighborhood, and why it will not hurt property values or cause problems, such as noise, dust, odors, vibration, fumes, glare, or physical activity, etc. with neighboring property owners. Will the project involve any uses that are not contained within a building? If yes, please describe. If not, state that all uses will be within a building. Explain how construction-generated dust (if any) will be controlled. Have other properties in your area obtained approval of a similar request? How will your project differ in appearance from your neighbors? Your response should consider the proposed physical appearance of your proposal, as well as comparing your use to others in the area.**

The proposed project is similar in nature to the other existing medical facilities in the area. The use will not create additional noise, dust, odors, vibration, fumes, glare, or physical activity above and beyond the property's previous use. Land uses will be primarily contained within the building. Construction generated dust will be controlled by utilization of BMP's during construction. Yes, other properties in the area have obtained approvals of a similar nature. The proposed project will be similar in size and scale to the previous use and the existing uses to the north, while utilizing similar building materials and building themes of the properties to the south, east and west.

- C. Provide a statement explaining how your project will not be detrimental to the use, peaceful enjoyment or development of surrounding properties and the general neighborhood.**

The proposed project is similar in nature to the surrounding land uses and will blend nicely into the area and therefore will not be detrimental to the peaceful enjoyment of the surrounding properties.

- D. Consider the pedestrian and vehicular traffic that currently exists on the road serving your project. What impact will your development have when it is successfully operating? Will vehicles be making left turns? Will additional walkways and traffic lights be needed? Will you be causing traffic to substantially increase in the area? What will be the emergency vehicle response time? State how you have arrived at your conclusions. What City department have you contacted in researching your proposal? Explain the effect of your project with the existing traffic in the area.**

The proposed development will slightly increase the surrounding pedestrian and vehicular traffic when successfully operating. Vehicles will be making left turns from N. Mountain St. and W. Washington St. Additional walkways and traffic lights will not be needed. Traffic will have an estimated vehicular trip generation of between 22 and 29 peak hour trips which are far below the 80 peak hour trips required to trigger a traffic study per Carson City municipal Code. There is a fire station located roughly three quarters of a mile away from the development which should give an emergency vehicle response time of 3 to 5 minutes

(Response times were gathered utilizing Carson City online data). See Traffic section for complete discussion.

- E. Explain any short-range and long-range benefit to the people of Carson City that will occur if your project is approved.**

The proposed project will provide a necessary service to the people of Carson City while providing high quality jobs to the area. In the long term the services provided will make it more convenient to those in need, and may potentially keep them in the Carson City area, which in turn will keep money in the local economy that may otherwise be spent elsewhere.

- Question 3. Has sufficient consideration been exercised by the applicant in adapting the project to existing improvements in the vicinity?**

- Explanation A. How will your project affect the school district? Will your project add to the student population or will it provide a service to the student population? How will your project affect the Sheriff's Office?**

The proposed development will not create any changes in the needs from internal service departments as the residents will not be school aged and fire and sheriff service requirements will be similar to previous development.

- B. If your project will result in the covering of land area with paving or a compacted surface, how will drainage be accommodated? Talk to Engineering for the required information.**

The development of this site for the uses proposed will not significantly increase upstream or downstream storm flow runoff rates, volumes, velocities, depths, and will not influence floodplain boundaries. See the Hydrology section and complete report in Appendix C.

- C. Are the water supplies serving your project adequate to meet your needs without degrading supply and quality to others in the area? Is there adequate water pressure? Are the lines in need of replacement? Is your project served by a well? Talk to Public Works for the required information.**

The water supplies in the area of our project are adequate to meet the needs without degrading supply and quality to others. There is adequate water pressure and existing water lines are satisfactory working condition.

- D. Is there Adequate capacity in the sewage disposal trunk line that you will connect to in order to serve your project, or is your site on a septic system? Please contact Public Works for the required information.**

The existing sewer system surrounding the subject property consists of predominantly 8"-12" sewer lines, generally beneath adjacent roadways. This configuration should be able to adequately support the proposed development without adversely impacting existing services.

- E. What kind of road improvements are proposed or needed to accommodate your project? Have you spoken to Public Works or Regional Transportation regarding road improvements?**

The only proposed improvements will be the replacement of existing driveway and sidewalk. Additional road improvements will not be needed.

- F. Indicate the source of the information that you are providing to support your conclusions and statements made in this packet (private engineer, Public Works, Regional Transportation, title report, or other sources).**

The information provided is a collaboration between Manhard Consulting, LRS Architecture and Sandra Wendel and Associates. It is in compliance with Carson City Municipal Code, NAC and NRS. Requirements from Major Project Review MPR-14-042 are met. Utility and Internal Service information was gathered from appropriate Carson City entities as cited when used.

- G. If outdoor lighting is to be a part of the project, please indicate how it will be shielded from adjoining property and the type of lighting (wattage/height/placement) provided.**

Although it is anticipated that outdoor lighting will ultimately be part of the proposed project, a detailed lighting plan is not included as part of this submittal package. Any lighting associated with the proposed development will be in accordance with Carson City Municipal Code Development standards Lighting Section 1.3.

- H. Describe the proposed landscaping, including screening and arterial landscape areas (if required by the zoning code). Include a site plan with existing and proposed landscaping shown on the plan which complies with City ordinance requirements.**

The Preliminary landscape plan is as shown in Figure 10. Where trees exist in proposed landscape areas they will be preserved as feasible, dependent on final grading elevations and to be evaluated by a Certified Arborist.

- I. Provide a parking plan for your project. If you are requesting approval for off-site parking within 300 feet, provide site plans showing (1) parking on your site, (2) parking on the off-site parking lot, and (3) how much of the off-site parking area is required for any business**

other than your own. Design and dimensions of parking stalls, landscape islands, and traffic aisles must be provided. If there is any other information that would provide a clearer picture of your proposal that you would like to add for presentation to the Planning Commission, please be sure to include this information. Please type the following signed statement at the end of your application questionnaire.

See Site Plan in Appendix B

ACKNOWLEDGMENT OF APPLICATION

I certify that the foregoing statements are true and correct to the best of my knowledge and belief. I agree to fully comply with all conditions as established by the Planning Commission. I am aware that this permit becomes null and void if the use is not initiated within one-year of the date of the Planning Commission's approval; and I understand that this permit may be revoked for violation of any of the conditions of approval. I further understand that approval of this application does not exempt me from all City code requirements.

Master Plan Policy Checklist

Special Use Permit, Major Project Review & Administrative Permits

PURPOSE

The purpose of a development checklist is to provide a list of questions that address whether a development proposal is in conformance with the goals and objectives of the 2006 Carson City Master Plan that are related to non-residential and multi-family residential development. This checklist is designed for developers, staff, and decision-makers and is intended to be used as a guide only.

Development Name: Prestige Skilled Nursing and Memory Care Facility

Reviewed By: _____

Date of Review: _____

DEVELOPMENT CHECKLIST

The following five themes are those themes that appear in the Carson City Master Plan and which reflect the community's vision at a broad policy level. Each theme looks at how a proposed development can help achieve the goals of the Carson City Master Plan. A check mark indicates that the proposed development meets the applicable Master Plan policy. The Policy Number is indicated at the end of each policy statement summary. Refer to the Comprehensive Master Plan for complete policy language.

CHAPTER 3: A BALANCED LAND USE PATTERN

The Carson City Master Plan seeks to establish a balance of land uses within the community by providing employment opportunities, a diverse choice of housing, recreational opportunities, and retail services.

Is or does the proposed development:

- ☐ Meet the provisions of the Growth Management Ordinance (1.1d, Municipal Code 18.12)?
- ☒ Use sustainable building materials and construction techniques to promote water and energy conservation (1.1e, f)?
- ☒ Located in a priority infill development area (1.2a)?
- ☐ Provide pathway connections and easements consistent with the adopted Unified Pathways Master Plan and maintain access to adjacent public lands (1.4a)?
- ☒ Protect existing site features, as appropriate, including mature trees or other character-defining features (1.4c)?

- ☐ At adjacent county boundaries or adjacent to public lands, coordinated with the applicable agency with regards to compatibility, access and amenities (1.5a, b)?
- ☒ In identified Mixed-Use areas, promote mixed-use development patterns as appropriate for the surrounding context consistent with the land use descriptions of the applicable Mixed-Use designation, and meet the intent of the Mixed-Use Evaluation Criteria (2.1 b, 2.2b, 2.3b, Land Use Districts, Appendix C)?
- ☒ Meet adopted standards (e.g. setbacks) for transitions between non-residential and residential zoning districts (2.1 d)?
- ☐ Protect environmentally sensitive areas through proper setbacks, dedication, or other mechanisms (3.1 b)?
- ☐ Sited outside the primary floodplain and away from geologic hazard areas or follows the required setbacks or other mitigation measures (3.3d, e)?
- ☒ Provide for levels of services (i.e. water, sewer, road improvements, sidewalks, etc.) consistent with the Land Use designation and adequate for the proposed development (Land Use table descriptions)?
- ☐ If located within an identified Specific Plan Area (SPA), meet the applicable policies of that SPA (Land Use Map, Chapter 8)?

CHAPTER 4: EQUITABLE DISTRIBUTION OF RECREATIONAL OPPORTUNITIES

The Carson City Master Plan seeks to continue providing a diverse range of park and recreational opportunities to include facilities and programming for all ages and varying interests to serve both existing and future neighborhoods.

Is or does the proposed development:

- ☐ Provide park facilities commensurate with the demand created and consistent with the City's adopted standards (4.1 b)?
- ☐ Consistent with the Open Space Master Plan and Carson River Master Plan (4.3a)?

CHAPTER 5: ECONOMIC VITALITY

The Carson City Master Plan seeks to maintain its strong diversified economic base by promoting principles which focus on retaining and enhancing the strong employment base, include a broader range of retail services in targeted areas, and include the roles of technology, tourism, recreational amenities, and other economic strengths vital to a successful community.

Is or does the proposed development:

- ☒ Encourage a citywide housing mix consistent with the labor force and non-labor force populations (5.1 j)
- ☐ Encourage the development of regional retail centers (5.2a)
- ☐ Encourage reuse or redevelopment of underused retail spaces (5.2b)?
- ☐ Support heritage tourism activities, particularly those associated with historic resources, cultural institutions and the State Capitol (5.4a)?
- ☐ Promote revitalization of the Downtown core (5.6a)?

- ☐ Incorporate additional housing in and around Downtown, including lofts, condominiums, duplexes, live-work units (5.6c)?

CHAPTER 6: LIVABLE NEIGHBORHOODS AND ACTIVITY CENTERS

The Carson City Master Plan seeks to promote safe, attractive and diverse neighborhoods, compact mixed-use activity centers, and a vibrant, pedestrian-friendly Downtown.

Is or does the proposed development:

- ☒ Use durable, long-lasting building materials (6.1 a)?
- ☒ Promote variety and visual interest through the incorporation of varied building styles and colors, garage orientation and other features (6.1 b)?
- ☒ Provide variety and visual interest through the incorporation of well-articulated building facades, clearly identified entrances and pedestrian connections, landscaping and other features consistent with the Development Standards (6.1 c)?
- ☒ Provide appropriate height, density and setback transitions and connectivity to surrounding development to ensure compatibility with surrounding development for infill projects or adjacent to existing rural neighborhoods (6.2a, 9.3b 9.4a)?
- ☐ If located in an identified Mixed-Use Activity Center area, contain the appropriate mix, size and density of land uses consistent with the Mixed-Use district policies (7.1 a, b)?
- ☐ If located Downtown:
 - ☐ Integrate an appropriate mix and density of uses (8.1 a, e)?
 - ☐ Include buildings at the appropriate scale for the applicable Downtown Character Area (8.1 b)?
 - ☐ Incorporate appropriate public spaces, plazas and other amenities (8.1 d)?
- ☐ Incorporate a mix of housing models and densities appropriate for the project location and size (9.1 a)?

CHAPTER 7: A CONNECTED CITY

The Carson City Master Plan seeks promote a sense of community by linking its many neighborhoods, employment areas, activity centers, parks, recreational amenities and schools with an extensive system of interconnected roadways, multi-use pathways, bicycle facilities, and sidewalks.

Is or does the proposed development:

- ☐ Promote transit-supportive development patterns (e.g. mixed-use, pedestrian-oriented, higher density) along major travel corridors to facilitate future transit (11.2b)?
- ☐ Maintain and enhance roadway connections and networks consistent with the Transportation Master Plan (11.2c)?
- ☐ Provide appropriate pathways through the development and to surrounding lands, including parks and public lands, consistent with the Unified Pathways Master Plan (12.1 a, c)?

The map displays a street grid with the following streets labeled:

- Vertical Streets (from left to right):**
 - TAHOE DRIVE
 - MOUNTAIN STREET
 - LANE CIRCLE
 - N. MINNESOTA STREET
 - N. NEVADA STREET
 - N. DIVISION STREET
 - N. CURRY STREET
- Horizontal Streets (from top to bottom):**
 - W. ADAMS ST.
 - MILLER WAY
 - PINE VIEW WAY
 - FELSCHMANN WAY
 - W. JOHN ST.
 - W. WILLIAM ST.
 - W. SOPHIA ST.
 - W. ANN ST.
 - W. WASHINGTON ST.
 - W. CAROLINE ST.

A large, irregularly shaped area is shaded with diagonal lines and labeled **PROJECT SITE** with a large arrow pointing to it. The shaded area is located between Mountain Street and N. Minnesota Street, and between Felschmann Way and W. Washington St.

A north arrow is located in the top right corner of the map.

N.T.S.

1 Introduction

1.1 Purpose of Study

This report presents the data, hydrologic and hydraulic analyses, and conclusions of a preliminary drainage study performed for the proposed Carson Tahoe Hospital Prestige Care Facility. The information, data, and calculations presented herein are intended to provide preliminary drainage information for the application of a Special Use Permit in accordance with the Carson City Municipal Code.

A cross-reference with the improvement plans will aid in the understanding of this report. Please note - this study is intended to be a working document and will be updated and/or revised as needed to correspond with design modifications. In addition, in the interest of brevity and clarity, this report will defer to figures, tables, and the data and calculations contained in the appendices whenever possible.

1.2 Project Location and Description

The following report represents the preliminary storm drain analysis for the Carson Tahoe Hospital Prestige Care Facility Project (PCF Project) which is located south of Fleischmann Way, west of North Minnesota Street, north of East Washington Street, and east of North Mountain Street in Carson City, Nevada (Figure #1). The PCF Project is a proposed 1.21 acre health care facility with the associated landscaping, parking, and civil improvements. The proposed site combines parcel numbers APN's: 001-201-15/16/26/27 for an overall project area of 4.94 acres.

According to the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) Community-Panel Number 3200010092F, the subject property is in Zone AO (2' Depth) and Zone X. A majority of the site is located in the Zone AO with a 2' depth and the remaining area is Zone X is an area determined to be outside the 100-year floodplain. Reference FEMA panel in Appendix A.

The purpose of this report is to analyze the existing and proposed conditions of the subject property based on the 5-year and 100-year peak flow events. The report contains the following sections: (1) Methodology, (2) Existing Hydrology, (3) Proposed Hydrology, and (4) Conclusion.

2 Methodologies and Assumptions

2.1 Hydrologic Analysis Methods

Hydrologic analyses were performed to determine the peak discharge for the 5-year and 100-year peak flow events. *Autodesk Sanitary and Storm Analysis* (SSA) was used to perform a *Rational Method* analysis to model the hydrologic basins that contribute in the existing and proposed conditions.

Parameters for peak storm flow and runoff volume estimates presented herein were determined using the data and methodologies presented in the *Carson City Municipal Code, Division 14 – Storm Drainage* section. In instances where the Carson City Municipal Code, Division 14 (CCMC-14) was lacking information or specificity, the *Washoe County Hydrologic Criteria and Drainage Design Manual (1996)* and/or the other appropriate sources and software user manuals were referenced.

For the existing and proposed on-site hydrologic conditions, the Rational Method was utilized in accordance with the CCMC-14. A minimum time of concentration of 10-minutes was used for all subbasins for a conservative analysis.

The rainfall characteristics were modeled using the NOAA database (http://dipper.nws.noaa.gov/hdsc/pfds/sa/nv_pfds.html) to determine site specific depth of precipitation (Appendix A).

2.2 Hydraulic Modeling Methods

Hydraulic analyses were performed using the associated hydrologic data to provide the estimates of the elevation of floods for the selected recurrence intervals. Water-surface elevations were computed in SSA using hydrodynamic routing. Hydrodynamic routing solves the complete Saint Venant equations throughout the drainage network and includes modeling of backwater effects, flow reversal, surcharging, lopped connections, pressure flow, and interconnected ponds. Hydrodynamic routing provides a formulation for channels and pipes, including translation and attenuation effects.

2.3 Assumptions

Since the Rational Method was employed for developed on-site peak storm flow estimations, reductions associated with hydrograph routing and combining have been neglected from the analyses herein. This contributes to the conservative nature of the ‘worst case’ analysis methods applied in this study.

3 Existing Drainage Conditions

3.1 Existing Off-Site Drainage

The subject property is located in the Ash Canyon Drainage and is in Zone AO (2’ Depth). The effective hydraulic model routes a portion of the 100-year peak flood event through the site. The flows enter the western edge of the property at the intersection of North Mountain Street and Topaz Drive and at the intersection of North Mountain Street and Tahoe Drive. The peak flood flows in an easterly – southeasterly direction and eventually combine with other surface flows at the intersection of North Minnesota Street and West Washington Street.

3.2 Existing On-Site Drainage

The existing hydrologic analysis was based on the fact that the site was previously developed and the existing hydrologic sub-basins were delineated based on the existing stormdrain system.

For the existing catchment a time of concentration (T_c) and the Rational Method coefficients were selected, taking into consideration the catchment characteristics, which include catchment area and land cover. Weighted run-off coefficients were calculated for each basin (Table 1). A 5-year intensity of 1.47 in/hr and 100-year intensity of 3.57 in/hr were used. Table 1 and Figure 2 summarize the characteristics of on-site catchments in to study area. Reference Appendix B for the complete Rational Method analysis. Reference Figure 2 (Existing Hydrologic Conditions) in the map pocket for existing hydrology drainage map and the associated hydrologic sub-area.

Table 1 – Existing Conditions Rational Method Model Summary for the PCF Project, Reno, Nevada.

Sub-Basin	Area (Ac.)	Rational Method Coefficient (C_5/C_{100})	Time of Concentration (min)	Rainfall Intensity (I_5/I_{100}) (in/hr)	5-Year Peak Flows (cfs)	100-Year Peak Flows (cfs)
X-01	0.33	0.68/0.85	10.00	1.47/3.57	0.33	1.00
X-02	0.42	0.85/0.95	10.00	1.47/3.57	0.53	1.42
X-03	0.42	0.42/0.66	10.00	1.47/3.57	0.26	0.99
X-04	0.39	0.81/0.92	10.00	1.47/3.57	0.47	1.28
X-05	0.32	0.68/0.81	10.00	1.47/3.57	0.32	0.93
X-06	0.29	0.52/0.72	10.00	1.47/3.57	0.22	0.75
X-07	0.72	0.20/0.50	10.00	1.47/3.57	0.21	1.29
X-08	0.36	0.61/0.79	10.00	1.47/3.57	0.32	1.02
X-09	0.26	0.78/0.89	10.00	1.47/3.57	0.31	0.83
X-10	0.23	0.58/0.78	10.00	1.47/3.57	0.20	0.64
X-11	0.20	0.68/0.85	10.00	1.47/3.57	0.20	0.61
X-12	0.59	0.85/0.95	10.00	1.47/3.57	0.74	2.00
X-13	0.27	0.65/0.81	10.00	1.47/3.57	0.26	0.78
X-14	0.14	0.85/0.95	10.00	1.47/3.57	0.19	0.48
TOTAL	4.94	-----	-----	-----	4.56	14.02

The 5-year and 100-year peak flows from on-site catchment in the existing condition are 4.56 cfs and 14.02 cfs, respectively. The existing flows are conveyed in an existing stormdrain system and routed in a southeasterly direction.

4 Proposed Drainage Conditions

4.1 Proposed Off-Site Drainage

The previously discussed peak flow event (Section 3.1) will be routed around the proposed building. The proposed stormdrain system and the proposed street sections will convey the through the subject property to the intersection of North Minnesota Street and West Washington Street, which is similar to existing conditions according to the effective HEC-RAS model.

4.2 Proposed On-Site Drainage

The sub-areas took into account the proposed on-site and off-site flows that affect the site. The associated calculated 5-year and 100-year peak flows can be found in Table 2, the detention facility can be referenced in Tables 3 and Appendix C. Both pipe sizes and catch basins have been sized to accommodate the proposed flows. Reference Figure 3 in the map pocket for the associated hydrologic sub-areas and the proposed catch basins. For the catch basin design and analysis, the project site was divided into 11 on-site drainage basins. Weighted run-off coefficients were calculated for each basin (Table 2). A 5-year intensity of 1.47 in/hr and 100-year intensity of 3.57 in/hr were used. All drainage for the basins will be contained in swales and the roadway and will travel to the catch basins. From the catch basins, the flow will be routed through the proposed storm drain system. Refer to Appendix C, *Hydrologic Analysis* for all data and supporting calculations using the Rational Method.

Table 2 – Proposed Conditions Rational Method Model Summary for the PCF Project, Reno, Nevada.

Sub-Basin	Area (Ac.)	Rational Method Coefficient (C ₅ /C ₁₀₀)	Time of Concentration (min)	Rainfall Intensity (I ₅ /I ₁₀₀) (in/hr)	5-Year Peak Flows (cfs)	100-Year Peak Flows (cfs)
P-01	0.27	0.47/0.70	10.00	1.47/3.57	0.19	0.68
P-02	1.02	0.75/0.89	10.00	1.47/3.57	1.13	3.24
P-03	0.35	0.85/0.95	10.00	1.47/3.57	0.44	1.19
P-04	0.64	0.20/0.50	10.00	1.47/3.57	0.19	1.14
P-05	0.62	0.77/0.90	10.00	1.47/3.57	0.70	1.99
P-06	0.17	0.63/0.81	10.00	1.47/3.57	0.16	0.49
P-07	0.21	0.48/0.70	10.00	1.47/3.57	0.15	0.53
P-08	0.75	0.62/0.80	10.00	1.47/3.57	0.68	2.14
P-09	0.41	0.85/0.95	10.00	1.47/3.57	0.50	1.36
P-10	0.28	0.53/0.70	10.00	1.47/3.57	0.22	0.70
P-11	0.22	0.85/0.95	10.00	1.47/3.57	0.28	0.75
TOTAL	4.94	-----	-----	-----	4.64	14.21

4.3 Detention

There is very little increase in flows from the existing and proposed conditions. This is due to the subject property being previously developed and having similar runoff coefficients. According to the existing and proposed hydrologic analysis, the existing 5-year and 100-year condition flows are 4.56 cfs and 14.02 cfs, respectively. The proposed 5-year and 100-year condition flows are 4.64 cfs and 14.21 cfs. Therefore, according to CCMC-14, the proposed detention facility will detain more than the required 0.08 cfs.

5 Conclusions and Recommendations

5.1 General Considerations

This study is intended to be a working document and may require updates and revisions to address the status of the improvement plans. As grading designs and surface water flow patterns are refined with subsequent plan editions, revisions may be required for the street flow and catch basin interception/bypass calculations provided herein.

5.2 Regulations and Master Plans

The proposed improvements and the analyses presented herein are in accordance with drainage regulations presented in *Carson City Municipal Code, Division 14 – Storm Drainage* section. In instances where the Carson City Municipal Code, Division 14 (CCMC-14) was lacking information or specificity, the Washoe County *Hydrologic Criteria and Drainage Design Manual (1996)* and/or the other appropriate sources and software user manuals were referenced.

5.3 Impacts to Adjacent Properties

The performance of the proposed project improvements, roadways, detention/retention, and storm water conveyance facilities, once constructed, will not adversely impact upstream or downstream properties adjacent to this site. The development of this site for the uses proposed will not significantly increase upstream or downstream storm flow runoff rates, volumes, velocities, depths, and will not influence floodplain boundaries. The fact that the subject property was previously developed there will be additional impacts to adjacent properties.

5.4 Standards of Practice

This study was prepared using the degree of care and skill ordinarily exercised, under similar circumstances, by reputable professional engineers practicing in this and similar localities.

¹ Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Please refer to NOAA Atlas 14 document for more information.

[Back to Top](#)

14.1 - Drainage policy introduction and basic principles.

Adequate drainage systems shall be provided in order to preserve and promote the general health, welfare, and economic well being of the region. Drainage is a regional feature that affects all of Carson City. Drainage plans shall be consistent with and integrated with the Carson City drainage master plan upon adoption. This characteristic of drainage requires coordination and cooperation from both the public and private sectors.

Storm water drainage systems are an integral part of the development process. The planning of drainage facilities shall be included in the development process and in preparation of improvement plans.

Drainage systems require space to accommodate conveyance and storage functions. When the space requirements are considered, the provision for adequate drainage becomes a competing use for space along with other land uses.

Storm drainage planning for all development shall include the allocation of space for drainage facility construction and maintenance, which may entail the dedication of right-of-way and/or easements. The provision of multi-use facilities such as combining with parks, open space, and recreation needs is strongly encouraged.

14.1.1 Water Rights. All drainage systems shall be planned and constructed with consideration given to the existing water rights and applicable water laws.

14.1.2 Reasonable Use of Drainage. Downstream properties shall not be unreasonably burdened with increased flow rates, negative impacts, or unreasonable changes in manner of flow from upstream properties. Drainage problems shall not be transferred from one location to another. However, downstream properties cannot block natural or existing runoff through their site and shall accept runoff from upstream properties.

"Reasonable use of drainage" is defined for planning purposes, as providing an economic and hydraulically efficient drainage system which is demonstrated not to adversely and unreasonably impact downstream properties within reason. This "reasonable use of drainage" therefore allows development to occur while preserving the rights of adjacent property owners.

14.1.3 Change in Manner of Flow. Development shall tend to concentrate existing natural sheet flow into point flows at property lines. These point flows are generally associated with outlets from gutter flow, storm drains, and detention facilities. Downstream properties may experience a longer duration of storm flows, and greater flows in general due to a shortened time of concentration. Discharge of point flows on downstream property can cause increased erosion at the discharge point and further downstream. Therefore, downstream facilities shall be evaluated for runoff capacity during the design and review process. Mitigation of these point flows can be accomplished through energy dissipaters or flow spreaders. Point flows shall be discharged to downstream properties at non-erosive velocities and depths of flow.

14.1.4 Diversion of Drainage. Development can alter the historic or natural drainage paths. When these alterations result in a local on-site drainage system that discharges back into the natural drainage-way or wash at or near the historic location, then the alterations (inter-basin transfer) are generally acceptable. However, when flows from the local on-site drainage system do not return to the historic drainage-way or wash, then inter-basin transfer may result. These inter-basin transfers are generally not acceptable. Planning and design of drainage systems shall not be based on the premise that storm water can be transferred from one basin to another unless part of an adopted city regional drainage system plan.

The flow of storm runoff shall be maintained within its natural drainage course unless reasonable use is demonstrated otherwise. When storm water is discharged into an existing drainage course, the peak discharge into the water course shall not adversely affect or cause damage to property along the drainage course now or in the future based on existing zoning and the Carson City master plan build-out conditions. Erosional impacts due to concentration of flows and increased flow durations shall be evaluated and mitigated.

14.1.5 Water Quality. Storm drainage improvements shall incorporate water quality and erosion controls in accordance with the Nevada "Handbook of Best Management Practices," this division, and accepted engineering practice. Storm drainage leaving a development may not be of a quality that shall adversely affect downstream uses.

14.1.6 Drainage Improvements. Drainage improvements consist of curb and gutter, inlets and storm drains, culverts, bridges, swales, ditches, channels, detention areas, and other drainage facilities required to convey design storm runoff to the point of discharge. Drainage improvements are further defined as on-site (private) facilities that serve a specific development and are privately owned and maintained or off-site (public) facilities. Public and private drainage facilities shall be constructed in accordance with the requirements of this division.

14.1.7 Floodplain Management. Floodplain management shall provide the guidance, conditions, and restrictions for development in floodplain areas while protecting the public's health, safety, welfare, and property from danger and damage. Development within the Federal Emergency Management Agency (FEMA) designated floodplains shall comply with CCMC, and requirements of the National Flood Insurance Program (NFIP).

14.1.8 Storm Runoff Detention. Detention is considered a viable method to reduce storm runoff from developed properties. Temporarily detaining storm runoff can significantly reduce downstream flood hazards as well as pipe and channel requirements. Storage also provides for sediment and debris collection which reduces maintenance requirements for downstream channels and streams.

Local detention storage for land development, which includes subdividing land, shall be required when the development increases flows and downstream conveyance capacities of the drainage system are not capable of handling non-detained flows, and the developer elects to not upgrade the existing storm drainage system. Onsite detention storage shall be sized to detain sufficient runoff to limit flows from a five (5) year storm (Q5) to their predevelopment condition.

The capacity of downstream conveyance systems shall be analyzed in accordance with this division and shall be based on runoff from the development as fully improved. Local detention can also be required when designated in flood or drainage master plans to reduce the peak rate in regional facilities.

Exemptions to the detention policy may be granted by the city for the following:

1. Developments which discharge directly to a regional flood control facility, provided the facility is completed per the adopted plan and designed for the contributing flows.
2. Locations where a local detention facility is designed and constructed to serve several developments and the contributing flows.
3. Downstream facilities are upgraded to accommodate the increased flow.
4. Where the downstream facilities are adequate to carry up to one hundred (100) year flows.

All exemptions are subject to approval by the city.

14.1.9 Lower Watershed Design. In certain circumstances, i.e., close to the drainage system's point of discharge, it may be desirable to not detain storm water runoff. The option to directly discharge shall be at the sole option of the city and after review of a flood route analysis.

14.1.10 Storm Runoff Retention and Infiltration. Storm runoff retention and infiltration has been used to eliminate the need for constructing outlet structures and for ease of construction. However, problems with retention basins and infiltration facilities include perpetual maintenance requirements, soil expansion, siltation, decreasing infiltration capacity, insect abatement and also poses a hazard to city groundwater resources through possible contamination.

14.1.11 Drainage Facilities Maintenance. An important part of all storm drainage facilities is the continued maintenance of the facilities to insure they shall function as designed. Maintenance of detention facilities involves removal of debris and sediment. Such tasks are necessary to preclude the facility from becoming unhealthy and to retain the effectiveness of the detention

basin. Sediment and debris must also be periodically removed from channels and storm drains. Trashrack and street inlets must be regularly cleared of debris to maintain system capacity. Channel bank erosion, damage to drop structures, crushing of pipe inlets and outlets, and deterioration to the facilities must be repaired to avoid reduced conveyance capability, unsightliness, and ultimate failure.

All drainage facilities shall be designed to minimize facility maintenance as well as to provide ease of maintenance and include maintenance access to the drainage facility. The owner of the drainage facilities shall be responsible for mosquito control and the method of control shall comply with Carson City environmental health department.

The property owner or developer shall be responsible for maintenance of all privately owned on-site drainage facilities including, but not limited to, inlets, pipes, channels, and detention basins, unless otherwise required or modified by separate agreement. Shall the property owner or developer fail to adequately maintain said facilities, Carson City shall be given the right to enter said property, upon proper notice, for the purposes of maintenance. All such maintenance costs shall be assessed against the owner(s). A maintenance agreement shall be provided to the city for all projects.

14.1.12 Drainage Easements. Easements shall be provided where necessary for access and maintenance of the storm drain system.

(Ord. 2001-23, Development Standards).

14.2 - Technical criteria.

14.2.1 Design Storm Events. Drainage facilities shall be designed to convey the run off for the twenty-four (24) hour duration storm with a recurrence interval for a minor storm event (five (5) year) and a major storm event (one hundred (100) year).

14.2.1.1 Storm Runoff Determination. Storm runoff (rates and volumes) shall be determined in accordance with the following methods (other methods may be used if approved by development engineering):

Contributing Basin Area (A)	Computation Procedure
A ≤ 100 Acres	Rational formula, SCS TR-55, or HEC-1 SCS Unit Hydrograph or Kinematic Wave)
10 SM.> A ≥ 100 Acres	SCS TR-55 or HEC-1 (SCS Unit Hydrograph or Kinematic Wave)
A > 10 S.M.	HEC-1 (SCS Unit Hydrograph or Kinematic Wave)

14.2.1.2 Rainfall. Rainfall data tables and storm design information shall be derived from the NOAA Atlas, latest edition, or other city approval.

14.2.1.3 Streets. The use of streets to convey runoff, although naturally occurring, interferes with the primary function of the street for transportation purposes. Streets are, however, an important component in the storm drainage system due to their large storm carrying capacity obtained for little or no drainage costs. In order to balance these two competing street uses, limits on the street carrying capacity are required based on the street classification related to emergency usage during storm and flood events.

The allowable street capacity for different roadway functional classifications shall be determined in accordance with Table 14.1 and Table 14.2. To ensure cleaning velocities at low flows, gutters shall have a minimum slope of four-tenths of one percent (0.40%).

14.2.1.4 Culverts, Bridges, Valley Gutter and Dip Sections. Culverts and bridges shall be installed where natural or manmade drainage channels are crossed by streets. Valley gutters, or "dip sections," shall be permitted on local streets. The amount of channel flow which crosses over the street shall be minimized (not more than 0.5 feet) to protect the street embankment and pavement from erosion damage as well as to protect vehicles and pedestrians from dangerous flow depths and velocities. Bridges and culvert crossings under streets shall be sized for the required design storm capacity in accordance with Table 14.1

Table 14.1
Design Storm Events for Crossings

Design Storm Criteria	Design Storm Event (see Notes)
1. Local Streets	25-year return period, 24-hour duration
2. Arterial and Collector Streets	100-year return period, 24-hour duration
3. Developments (commercial, industrial, residential)	5-year return period, 24-hour duration

Notes:

1. All development shall provide emergency flow paths for a one hundred (100) year peak storm in accordance with Table 14.2
2. Refer to section 14.3.1 for additional situations where the drainage system shall be designed for not less than a one hundred (100) year return period, twenty-four (24) hour duration.
3. Refer to section 14.1.8 for additional requirements for projects located within a floodplain.

(Ord. 2001-23, Development Standards).

14.3 - Storm drain system.

14.3.1 Introduction. The size of the storm drain system is generally governed by the design storm peak flows as shown in Table 14.2. There are conditions, however, when the storm drain system design shall be governed by the one hundred (100) year return period, twenty-four (24) hour duration storm flows. Storm drain systems shall be designed for not less than a one hundred (100) year peak storm for the following situations:

1. Locations where street flow is collected in a sump with no allowable overflow capacity.
2. Locations where the desired one hundred (100) year return period, twenty-four (24) hour duration storm flow direction is not reflected by the street flow direction during a one hundred (100) year return period, twenty-four (24) hour duration storm (i.e., flow splits at intersections).

If a storm drain is to be designed to convey one hundred (100) year return period, twenty-four (24) hour duration storm flows, then the inlets to the storm drain shall be designed accordingly.

Table 14.2
Design Storm Street Capacity Limitations

Roadway Functional Classification	Maximum Limits of Street Inundation (See Notes)
1) Arterial	Q5 Storm: Flow contained in R/W. No curb overtopping. A minimum forty-eight foot (48) wide dry lane centered shall be maintained and in each direction twenty-four feet (24). Runoff in excess of street capacity shall be piped.
	Q100 Storm: Flow contained to not inundate structures. Maximum depth at gutter flow line shall be 1 foot (1). A minimum twelve foot (12) wide dry lane shall be maintained in each direction or twenty-four feet (24) centered.
2) Collector	Q5 Storm: Flow contained in R/W. No curb overtopping. A minimum eighteen foot (18) wide dry lane centered shall be maintained. Runoff in excess of street capacity shall be piped.
	Q100 Storm: Flow contained to not inundate structures. Maximum depth at gutter flow line shall be one foot (1). A minimum twelve foot (12) wide dry lane shall be maintained centered.
3) Local or Industrial Street	Q5 Storm: Flow contained in R/W. No curb overtopping. A minimum twelve foot (12) wide dry lane centered shall be maintained. Runoff in excess of street capacity shall be piped.
	Q100 Storm: Flow contained to not inundate structures. Maximum depth at gutter flow line shall be one foot (1). Street flooded.

Notes:

1. Where no curb exists, encroachment onto adjacent property shall be allowed but must contained to not inundate structures.
2. Other criteria such as the Federal Housing Administration regulations may impose standards more restrictive than cited.

14.3.2 Design Criteria.

14.3.2.1 Allowable Storm Drain Capacity.

The storm drain capacity calculations shall begin at the storm drain outlet and proceed upstream, accounting for all energy losses. The Energy Grade Line (EGL) and Hydraulic Grade Line (HGL) shall be calculated to include all hydraulic losses including friction, expansion, constriction, bend, and junction losses. The available energy at all junctions and transitions shall be checked to

determine whether or not the flow in the storm drain shall be pressurized due to backwater effects even if the design flow is less than the full flow capacity of the storm drain.

If any section of the storm drain is pressurized due to backwater effects, then the storm drain system shall be designed to convey the design storm under surcharged or pressure flow conditions. The storm drain shall be considered surcharged when the depth of flow (HGL) in the storm drain is greater than eighty percent (80%) of full flow depth. The maximum level of surcharging for the capacity analysis shall be limited to maintaining the HGL to one foot (1') below the final grade above the storm drain at all locations. Special site conditions that warrant additional surcharging shall require locking type manhole covers or grated covers and shall be reviewed on a case-by-case basis by development engineering.

- 14.3.2.2 Allowable Storm Drain Velocity. The maximum allowable storm drain velocity is dependent on many factors including the type of pipe, the acceptable wear level during the pipe design life, proposed flow conditions (open channel versus pressure flows), and the type and quality of construction of joints, manholes, and junctions. In consideration of the above factors, the maximum velocity in all storm drains and culverts shall not exceed the erosion resisting capabilities of the conduit and storm drain system, but in no case exceed fifteen feet (15') per second (fps).

All storm drains and culverts, and low flow outlets shall be designed to maintain a minimum velocity of three (3) fps at half or full conduit conditions, but in no case shall the storm drain slope be less than one-fourth percent ($\frac{1}{4}\%$).

- 14.3.2.3 Manning's Roughness Coefficient. All storm drain system hydraulic calculations shall be performed using Manning's formula. A Manning's roughness factor, or "n," shall be as defined by the specific pipe manufacturer provided that the coefficient is within the range of accepted engineering standards.

- 14.3.2.4 Pipe Size. The minimum pipe size for storm inlet laterals and storm drain mains shall be fifteen inches (15") in diameter for round pipe, or an equivalent flow area for other pipe shapes.

- 14.3.2.5 Minimum and Maximum Cover. The required cover over a storm drain pipe is dependent on many factors including the design pipe strength, pipe size, and cover material. For practical purposes, the storm drain shall be protected from potential surface disturbances and displacements. The minimum and maximum cover is dependent upon the design pipe strength.

- 14.3.2.6 Manhole and Junction Spacing. A manhole, catch basin, or junction box shall be located at all changes in pipe size, direction, elevation and grade for all pipes with a diameter (or rise dimension) of less than forty-eight inches (48"), and at the end of all public storm drain lines (unless the storm drain daylights at the end of the line). Maximum spacing between manholes or junction boxes shall be three hundred fifty feet (350'). For pipes with a diameter (or rise dimension) of forty-eight inches (48") and greater, the designer shall consult with development engineering for location of manholes and junctions based on hydraulic and maintenance considerations.

- 14.3.2.7 Horizontal Alignment. The horizontal alignment of storm drains shall be generally straight between manholes and/or junctions. All storm drains shall be placed within the right-of-way dedicated for public streets unless the use of easements is approved by development engineering.

When storm drains are to be installed in existing streets, factors such as curbs, gutters, drainage ditches, sidewalks, traffic conditions, pavement conditions, future street improvement plans, and existing utilities shall be considered by the design engineer when selecting the storm drain location and alignment.

- 14.3.2.8 Utility Clearances. Storm drains and culverts shall be located to minimize potential contamination and disturbance of water supply and sanitary sewer mains. Additional requirements may be imposed by the local utility companies, or the Nevada Division of Health. Where requirements differ, the more stringent shall apply.

- 14.3.2.9 Storm Inlet and Catch Basin Types, Locations, and Capacity Factors. Standard storm inlet and catch basin details are included in the standard details. The allowable use of these storm inlet and catch basin types is presented on Table 14.3. Allowable inlet capacity factors for each of the standard inlets and catch basins are also presented on Table 14.3. These capacity factors shall

be applied to the theoretical capacity of the inlets and catch basins to account for conditions which decrease the capacity of the standard inlets. These conditions include plugging from debris and sediment, pavement overlaying, variations in design assumptions, and the general deterioration of the inlet and catch basin conditions over time. All catch basins shall have sumps (seventeen inches (17") minimum, twenty-four inches (24") maximum).

Catch basins or inlets shall be installed at low points of vertical curves, at all street intersections, and at sufficient intervals to intake the design storm peak flow such that flows shall not interfere with traffic or flood adjoining property in accordance with the requirements of Table 14.2. Catch basins and inlets at street intersections shall be located on the upstream side of the intersection and upstream of crosswalk locations.

When storm drain pipes are connected to a catch basin, inlet, or manhole with concrete/grout, both the inside and outside of the catch basin, manhole, or inlet shall be grouted at the pipe connection.

14.3.3 Materials.

14.3.3.1 Pipe Material and Shape.

The material and shape of the storm drain shall be in accordance with the "Standard Specifications for Public Works Construction." Round, square, or rectangular reinforced concrete pipe (RCP) in accordance with ASTM C-789 or C-850 shall be used for storm drain construction under roadways, driveways and other traffic areas. Reinforced concrete pipe shall be at a minimum Class III, or the appropriate class when design requires a greater pipe support strength. Other pipe materials as approved by the city for storm drain use, with the exception of corrugated metal (permitted for residential driveway culverts), are permitted outside of roadway or traffic areas.

14.3.3.2 Manholes. Precast manhole tees are not allowed where there is a change in storm drain slope or alignment or where there are intersecting storm drain mains or laterals. Pipes may be directly cast into the manhole base. Gasketed joints, locking type manhole covers, and/or grated manhole covers for pressure flow conditions may be required.

14.3.3.3 Storm Drain Outlet Protection. Storm drain outlets shall be designed to prevent the receiving channel from scour erosion or sediment deposition and shall be constructed with outlet protection for discharges to channels with unlined bottoms in accordance with the following:

Outlet Velocity (fps)	Minimum Outlet Protection
Less than 5	Rip-rap protection
Between 5 and 15	Rip-rap protection or Energy Dissipater
Greater than 15	Energy dissipater

For channels with unlined bottoms, the outlet discharge velocity shall not exceed the maximum allowable channel velocity without an energy dissipation structure. Specifications for the outlet protection shall be submitted with the improvement plans.

14.3.4 Storm Drain Hydraulic Analysis. A hydraulic analysis of all storm drains shall be performed and submitted to development engineering as part of the technical drainage report. Storm drain hydraulic and capacity analysis shall account for changes in flow conditions (open channel versus pressure flow) in the HGL and EGL calculations. Both the HGL and the EGL for the design flow shall be included on storm drain improvement plans as part of the drainage report.

Table 14.3
Allowable Storm Inlet Types and Capacity Factors

Inlet or Catch Basin Type	Permitted Use	Permitted Location Condition	Capacity Factor
Catch Basin Type 1	Private Use Only	Sump	0.65
Catch Basin Type 1A	Street with Curb and Gutter	Continuous Grade Sump	0.70 (Grate), 0.80 (Curb Opening) 0.65
Catch Basin Type 3	Landscaped or Unimproved Areas	Sump	0.50
Catch Basin Type 4	Street with Curb and Gutter	Continuous Grade Sump	0.70 (Grate), 0.80 (Curb Opening) 0.65

Notes:

1. Capacity factor is applied to the theoretical inlet capacity to obtain the allowable inlet capacity to account for factors which reduce actual inlet capacity.

14.3.5 Design Standards for Culverts. Culverts shall be designed and constructed using the following standards. The analysis and design shall consider design flow, culvert size and material, entrance structure layout, outlet structure layout, and erosion protection.

14.3.5.1 Culvert Sizing Criteria.

14.3.5.1.1 Design Frequency. As indicated in section 14.2.1.4 (culverts), all culverts shall be designed to pass the flow from the design storm including an overflow section where permitted.

14.3.5.1.2 Minimum Size. The minimum culvert size shall be eighteen inches (18") diameter for round pipe or an equivalent flow area for other pipe shapes.

14.3.5.2 Culvert Materials. Culverts shall be RCP in accordance with the standard details under roadways, and other traffic areas. For rural residential driveways CMP is allowed. The use of dip sections rather than culverts are encouraged for rural residential driveway crossings.

14.3.5.3 Outlet Protection. Outlet erosion protection for discharges to channels with unlined bottoms shall be provided as follows:

Outlet Velocity (fps)	Required Outlet Protection
Less than 5	Rip-rap protection
Between 5 and 15	Rip-rap protection or energy dissipater
Greater than 15	Energy dissipater

Specifications for the outlet protection shall be submitted with the improvement plans.

14.3.5.4 Headwater Criteria. The maximum headwater for the design storm for culverts greater than thirty-six inches (36") diameter or a culvert rise of thirty-six inches (36") shall be one-and-one-half (1.5) times the culvert height. The maximum headwater for culverts with a height of thirty-six inches (36") or less shall be five feet (5') if adjacent properties are not adversely affected.

14.3.5.5 Alignment. Whenever possible, culverts shall be aligned with the natural channel to reduce inlet and outlet transition problems.

14.3.5.6 Temporary Crossing. Temporary crossings are defined as dip road sections with a culvert sized to pass nuisance flow, or a culvert system that does not meet criteria presented in this manual. Temporary crossings shall be reviewed on a case by case basis. Consideration shall be given to the following items:

1. Drainage area contributing to crossing.
2. Level of roadway traffic.
3. Vertical and horizontal roadway alignment (sight distance).
4. Alternate access routes.
5. Time frame for temporary crossing (time to construction of permanent crossing).
6. Current and projected development density.
7. Twenty-five (25) year and one hundred (100) year storm flows.

14.3.5.7 Multiple Barrel Culverts. Multiple culverts may be used if available fill height limits the size of culvert needed to convey the flood flow.

14.3.5.8 Inlet and Outlet Configuration. Culverts shall be designed with protection at the inlet and outlet areas. The culvert inlet shall include a headwall with wingwalls or a flared end-section.

The outlet area shall also include a headwall with wingwalls or a flared end-section. Where outlet velocities exceed the limitation set forth in Section 14.3.5.3 (outlet protection), an energy dissipater shall be required.

14.3.5.9 Structural Design. All culverts shall be designed to withstand, as a minimum, an H-20 loading in accordance with the design procedures of AASHTO "Standard Specifications for Highway Bridges" and with the pipe manufacturer's recommendations.

14.3.6 Drainage Channels. When open drainage channels are permitted, the potential for erosion and scour shall be determined, and submitted as part of the drainage report. Recommended mitigation measures to prevent erosion and sediment deposition shall be identified and incorporated into design of the drainage channels. Flow velocities in drainage shall not exceed the maximum permissible flow velocities for the design storm as recommended in the American Society of Civil Engineers (ASCE) Manuals and Reports of Engineering Practice No. 77, "Design and Construction of Urban Storm water Management Systems."

Side slopes for unlined channels shall be 3:1 (horizontal to vertical) or flatter. Side slopes for lined channels shall be 2:1 (horizontal to vertical) or flatter. The use of rip rap as a channel lining is discouraged due to maintenance requirements.

All drainage channels that are not located within public rights-of-way shall be located in easements dedicated to the city or the appropriate entity, and shall be provided with a permanent maintenance access road in accordance with Section 12.11.14 (improved maintenance access) to provide access for maintenance.

(Ord. 2001-23, Development Standards).

Major Project Review: MPR-14-042

Project Description: Prestige Skilled Nursing and Memory Care Facility

Review Date: June 17, 2014

Major Project Review Comments

The Major Project Review Committee has reviewed the proposed plans for the Prestige Skilled Nursing and Memory Care Facility. The following requirements and comments are provided for your use in preparing final plans and submittals for the project. Please be advised that the comments presented in this letter are based on the plans submitted with the Major Project Review application and may not include all the requirements or conditions which may be placed on the project at the time of submittal of planning applications for approval (if applicable) or final plans for building permits. It is hoped, however, that this review will expedite the completion of your project.

Some of the requirements noted below may have already been shown or otherwise indicated in the plans and need only be submitted in the final improvement plan form. Final on- and off-site improvement plans shall be submitted to the Building Division, (108 E. Proctor Street). These plans must contain all appropriate requirements of Development Engineering, Health, Utilities, Fire, and Planning Divisions/Departments.

Planning applications (if applicable), such as Master Plan Amendments, Zoning Changes, Special Use Permits, Variances, Lot Line Adjustments, Parcel Maps, etc. shall be submitted to the Planning Division (108 E. Proctor Street) for review and approval.

SITE INFORMATION:

Address: 1001 Mountain Street

APN: 001-201-15, 001-201-16, 001-201-26 and 001-201-27

Parcel Size: 4.941 acres

Master Plan Designation: Mixed-Use Residential (MUR)

Zoning: Public/Community (PC)

PLANNING DIVISION

Contact Susan Dorr Pansky, Planning Manager

1. The proposed use is not permitted in the Public Community zoning district. A Zoning Map Amendment will be required to accommodate the skilled nursing facility under the definition of a congregate care facility. Staff suggests proposing a Zone Map Amendment to Multi-Family Apartment (MFA) to align with the Master Plan designation of Mixed-Use Residential.
2. The proposed congregate care facility use is a conditional use in the Multi-Family Apartment (MFA) zoning district. A Special Use Permit will be required. This Special Use Permit may be processed concurrently with the Zoning Map Amendment.
3. A Lot Line Deletion will be required to eliminate property lines to allow the proposed building. A Line Deletion was submitted on June 16, 2014 and is currently being reviewed and processed.

Special Use Permit - CCMC 18.02.080; Variance - CCMC 18.02.085

1. The project requires a Special Use Permit to accommodate a congregate care facility as a conditional use. A congregate care facility is only allowed in select zoning district, and in all cases requires a Special Use Permit.
2. Based on the conceptual plan presented, staff does not believe a Variance is necessary at this time.

Setbacks - CCMC 18.04.190 (Residential) or CCMC 18.04.195 (Non-residential)

	<u>Front</u>	<u>Rear</u>	<u>Side</u>	<u>Street Side</u>
Required in MFA zoning district:	10 feet*	20 feet**	10 feet**	N/A

* An additional 10 feet is required for each story above two stories.

** For each story above one story, add 10 feet if adjacent to a Single Family zoning district.

Height - CCMC 18.04.190 (Residential) or CCMC 18.04.195 (Non-residential)

A proposed building height was not provided. The maximum height in the MFA zoning district is 45 feet. Additional height may be allowed by Special Use Permit. If a Special Use Permit for additional height is desired, this may be accomplished as a part of the Special Use Permit for the overall project and does not require a separate Special Use Permit application.

Historic District - CCMC 18.06

A portion of the project area lies within the Carson City Historic District and will require adherence to Historic District Design Guidelines as well as Historic Resources Commission approval.

Any proposed project located within the Historic District to construct, alter, remodel, restore, renovate, rehabilitate, demolish, remove or change the exterior appearance of a building or structure; or to place signs, fences, or lighting; or to construct parking areas or site improvements; or which affects the exterior landscape features and spaces that characterize a property and its environment shall not be started without prior approval of an application

submitted to the Historic Resources Commission as provided for by CCMC 18.06. Application to the Historic Resources Commission shall be made through the Planning Division for processing. (CCMC 18.06.015)

New construction which is appropriately designed is encouraged by the Carson City Historic Resources Commission (HRC). The Historic District should be an active and vital part of the city. New construction should look new and reflect the technology, building materials and design ideas of the present era. The design of new construction needs to be compatible and respectful of the historic building stock that surrounds it so that visual conflict and confusion are avoided. There is no formula that will guarantee "good design". There are specific elements of building design which can be identified, and therefore, addressed in a review process so that consistency can be achieved. The following elements shall be individually assessed for their degree of appropriateness for each project. (Development Standards, Division 5.27)

1. Scale and Massing: The overall size and height of the new building should be consistent with the surrounding buildings. (Development Standards, Division 5.27.1)
2. Shape: The overall shape of the building, particularly its roof type, height, and design emphasis (horizontal or vertical) should be consistent and harmonious with others in the environs. (Development Standards, Division 5.27.2)
3. Setback: The front and side yard setbacks for the building should be approximately the same as others in the surrounding area and conform with CCMC Development Standards, Division 1, Land Use and Site Design. (Development Standards, Division 5.27.3)
4. Site Elements: When at all possible avoid substantial site alteration by importing or exporting fill materials. Generally speaking vacant lots in the district were once occupied by a building. Attempt to place the new building as near as possible to the same grade as the original. Carefully consider the placement and relationship of the public sidewalk, side and front yard fences, driveway, gardens and accessory buildings when determining the location of the new building on the lot. (Development Standards, Division 5.27.4)
5. Materials: Exterior siding should reflect the prevailing style of the neighborhood. A vertical or diagonal style siding should not be used when the dominant style is a horizontal drop or shiplap type. The exterior siding should blend in, not stand out. (Development Standards, Division 5.27.5)
6. Windows and Doors: The rhythm and arrangement of the windows and doors should reflect the style of the building design and the predominant patterns found in existing buildings of the area. The ratio of the total surface area of openings to total wall surface area of new buildings should reflect that of historic buildings in the environs. (Development Standards, Division 5.27.6)
7. Details and Other Elements: Trim details are often the single most relevant design feature which can be utilized to give harmony and compatibility to a new building. If existing buildings have boxed eaves, do not leave rafter tails exposed. If windows and doors typically have fanciful trim, incorporate trim with architecturally equal weight. If trim work is typically simple, do not use "ginger bread". Seek to design the new building so that the trim and architectural details compliment the existing buildings in the area. (Development Standards, Division 5.27.7)

8. Floor Elevations: The elevation of the first floor in relation to the street and the finish grade of the lot can often be a critical design feature. For example, if surrounding buildings normally have steps leading from street level up to the first floor level, then the new building should have a similar entrance level. (Development Standards, Division 5.27.8)

NOTE: Each of the design elements listed above has more detailed new construction information throughout Division 5 of the Development Standards. The applicant is encouraged to review each of these sections individually for more specific information.

Signs - Carson City Development Standards, Division 4

A Sign Permit will be required prior to the placement or erection of any sign, or to install or alter any electrical wiring or fixture. See the Planning Division for information and standards. A Sign Permit application may be obtained from the Building Division. (Development Standards, Division 4.4.1)

1. Permitted signs and maximum sign area shall be as follows (Development Standards, Division 4.7.5):
 - Permitted sign area for the parcel shall be calculated based on a ratio of three square feet for every one foot of the frontage of building for the first 100 feet of frontage. Sign area shall be calculated on a ratio of one square foot for every one foot of the frontage of the building/suite for the portion of the frontage exceeding the first 100 feet up to a maximum sign area of 600 feet.
 - One address sign not exceeding four square feet in area.
 - A maximum of 50 percent of the total allowable sign area may be located on the freestanding sign pursuant to Development Standards, Division 4.6.3.
2. Maximum sign height of the freestanding sign shall be 20 feet.
3. Illumination from or upon any sign shall be shaded, shielded, directed or reduced so as to avoid undue brightness, glare or reflection of lights.
4. Sign materials shall be compatible with the design of the primary on-site building.
5. Regardless of the amount of the frontage of the building or suite, each business is entitled to a minimum of 80 square feet of signs.

Landscaping - Carson City Development Standards, Division 3

1. A landscape and irrigation plan shall be filed with the City and approved by the Director prior to the approval of a site plan or issuance of a building permit. The plan shall be prepared by a landscape architect registered in the State of Nevada, or other person permitted to prepare landscape plans pursuant to Chapter 623A of the Nevada Revised Statutes (NRS). Landscaping on all commercial/industrial projects must be installed or supervised by an individual at the job location with at least one of the following credentials: Certified Landscape Technician, Licensed Landscape Contractor, Certified Landscape Professional, ISA Certified Arborist, Registered Landscape Architect, a C10 Qualified Employee as recognized by the State Contractor's Board, or an equivalent

certification, approved by the Parks & Recreation Department. (Development Standards, Division 3.3)

2. The plans shall include landscape calculations relevant to the application of the standards of Division 3 of the Development Standards and shall include a plant list in a legend format giving the common and botanical names of each plant with a key number or identifying symbol assigned to each plant, the size of the plant, its spacing and the quantity to be used. (Development Standards, Division 3.3.2)
3. The landscape plans shall include construction details for planting, staking, soil amendments and any special requirements for the project and may be an attachment to the plans. (Development Standards, Division 3.3.3)
4. Identification and description of automatic irrigation components to insure that vegetation is adequately serviced through water conserving features is required. Overhead sprinkler irrigation is only allowed on turf areas or other areas requiring overhead sprinkler irrigation. (Development Standards, Division 3.3.5)
5. Trees and significant shrubs shall be preserved whenever possible and shall be considered part of the required landscape area. Preservation of existing 4-inch caliper (6-8 foot for evergreens) healthy trees will be eligible for a 2:1 credit toward the total tree requirement if approved by the Director, up to a maximum of 25% of the requirement for trees on the site. Provide an overlay on all submitted plans of all existing trees with caliper (deciduous) or height (evergreen) and significant shrubs on the site and clearly mark which will be retained on the site and which are proposed to be removed. (Development Standards, Division 3.4)
6. Deciduous trees with a trunk diameter of four inch or greater at a point four and one-half foot above ground level or evergreen trees six foot or greater in height or significant shrubs, shall not be removed unless authorized by prior written approval from the Director. The applicant is encouraged to submit a report to the Director prepared by a certified arborist, or licensed design professional detailing a reason for a request to authorize removal of trees and significant shrubs. After consultation with other applicable City divisions, the Director may authorize the removal of existing trees and shrubs if any of the criteria listed below exist. (Development Standards, Division 3.4.1)
 - The health or condition of the tree presents a clear danger to people or property or it constitutes a nuisance.
 - When the tree or shrub is located within the footprint of the building, or when a tree trunk or shrub is so close to a building area that construction would result in irreparable damage or death to the plant.
 - Access is so restricted to the site that removal is necessary and unavoidable.
 - The elevation will be severely changed by grading/building/development. The tree or shrub cannot remain on the site as a result of the change in elevation.
 - Any other instances deemed appropriate by the Director shall be considered.
7. Tree Protection. All deviations from the Tree Protection Code must be approved by the Planning Division. Construction activities can severely damage or kill trees. See the Tree Retention/Protection, Root Pruning Detail, and Excavation Adjacent to Retained Trees in

the Development Standards, Division 3 Appendix for additional requirements and information. (Development Standards, Division 3.4.2)

8. Protective Fencing shall enclose the entire area under the canopy drip line of the tree protection zone throughout the life of the project, or until work within the tree protection zone is completed. The fence shall not be moved during construction phase without prior approval of the qualified site professional utilizing the best management practices. The protective fence may be removed at final grading inspection or at the time final landscaping is installed. Refer to the detail in the Development Standards, Division 3 Appendix for sample fence drawing. (Development Standards, Division 3.4.2)
9. All landscaping shall aesthetically enhance and be compatible with the site area. Landscaping shall be installed to enhance the view of the site from public street(s) and adjacent properties. (Development Standards, Division 3.5.1)
10. A minimum of 20% of the site's impervious surfaces excluding the building coverage must be pervious areas of landscape material. The area within the public right-of-way adjacent to a site must be landscaped and may be counted for 25% of the total required landscaped area. In areas with right-of-ways over 20 feet in depth, the Director may modify or waive the requirement for landscaping of the right-of-way. The requirement may also be waived by the Director if the public agency denies permission for an encroachment permit or lease of the area to be landscaped. (Development Standards, Division 3.5.2)
11. Where landscape areas abut sidewalks, drive-aisles, parking areas or other hardscape surfaces, a minimum three-foot wide landscape buffer area must be provided between any turf areas and the hard scape to capture irrigation overspray and runoff. The buffer area may be drip-irrigated plant materials or non-living landscape materials. (Development Standards, Division 3.6.3)
12. The minimum number of trees shall be one tree per 400 square feet of landscape area. Additional trees are required if the number of trees for parking areas and along right-of-way areas as described in Development Standards, Division 3.7.1.a and 3.7.1.b exceed this minimum. The Director may modify this standard for public uses such as parks. (Development Standards, Division 3.7.1)
 - Included in the minimum required number of trees, a minimum of one shade tree must be planted for every 10 parking spaces or fraction thereof, and distributed throughout the parking area surface to provide even shading within the parking lot. For example, 18 parking spaces shall require two trees. A minimum of one deciduous tree shall be placed in each standard sized parking island.
 - Included in the minimum required number of trees, at least one tree shall be placed along the right-of-way frontage for every 30 lineal feet of right-of-way at a point not more than 20 feet from the right-of-way. The Director may allow for different spacing or locations of trees for projects with outside display such as automobile sales lots.
13. Where more than 10 deciduous trees are provided as a part of the landscape plan, a minimum of 50% of the trees shall be of a different species to ensure diversity. Additional species may be required on larger projects. (Development Standards, Division 3.7.2)

14. Non-planted, non-living materials such as wood chips, bark, decorative rock, mulch, stone or other non-living materials may be used as groundcover, and shall be distributed throughout the site. All landscape areas shall be covered with materials suitable for reducing dust and evaporation and shall be designed to improve the aesthetic appearance of the area. An attractive mix of organic and non-organic materials is encouraged. Products which appear to be dirt shall not be used. (Development Standards, Division 3.8.2)
15. A ratio of at least six shrubs (five gallon size), is required for each tree placed or retained on the site. If a large quantity of turf is proposed for the site, the required shrub count may be reduced after review and approval of the submitted landscaping plans by the Planning Division. (Development Standards, Division 3.8.3)
16. On arterial streets, minimum 10 foot wide landscape areas shall be provided along the frontage of the site adjacent to the street. On all other streets, a minimum of six foot wide landscape area shall be provided along the frontage of the site adjacent to the street. On sites with unique constraints, the Director may approve an alternative dimension if the alternative does not compromise the integrity of the landscape plan. (Development Standards, Division 3.9)
17. Tree selection for projects will be guided by the approved Carson City Tree List for Commercial Projects. Trees planted in the City will be installed according to the City's tree planting standards. The approved tree list and standard planting details are located in the Appendix of the Development Standards, Division 3. (Development Standards, Division 3.10.8)
18. Parking and driveway areas shall include concrete curbs or similar improvements as approved by the Director for protection of landscaping. Vehicle overhangs into landscaped areas shall not exceed two feet. Planter areas shall not be less than 72 square feet in size and shall have a minimum width of six feet. (Development Standards, Division 3.11.1)
19. Snow storage should be incorporated within the design of projects and should be oriented for maximum sun exposure for acceleration of melting. Driveways, drive aisles, sidewalks and landscape areas cannot be used for snow storage. Drainage and run-off from snow storage areas shall be considered in the design. (Development Standards, Division 3.11.3)
20. All non-planted landscape areas shall be covered with materials such as mulch. Products which appear to be dirt shall not be used. A weed barrier fabric is required under all rock and cobble mulches and pre-emergent herbicide is recommended. (Development Standards, Division 3.11.5)
21. Conflicts shall be avoided in design of landscape improvements by considering the size and breadth of mature landscaping. Show existing and proposed overhead and underground power lines, utility poles, light standards and utility easements on submitted landscape plans. Fire hydrants, fire connections, water boxes (three feet clearance required), water and sewer service lines (10 feet clearance required for trees), overhead utilities, signs, roof overhangs, light standards etc., shall be taken into consideration in design of landscaping. Show all proposed and existing signage for the site. (Development Standards, Division 3.11.7)
22. All landscape areas must be maintained by the property owners, including using the most current pruning standards accepted by the ANSI International Society of

Arboriculture and/or the National Arborist Association. Any damaged or dead plant(s) must be replaced or repaired by the property owners within 30 days following notification by the Director. If the season of the year makes this repair or replacement within a 30 day period impractical, the person responsible for landscaping shall schedule an appropriate time for the completion of the accomplishment of this work as required and approved by the Director. Property owner shall provide a financial security in a form acceptable to the City, in the amount of 150% of the estimated cost of installation of remaining landscape improvements, which shall be filed with the City guaranteeing installation. The estimated cost of the landscaping improvements not yet completed must be verified by the City. (Development Standards, Division 3.13.1)

23. An acknowledgment by the property owner of the required maintenance for a project must be submitted to the City as a part of landscape and irrigation plan submittals. (Development Standards, Division 3.13.3)
24. Diagrams, text and examples are located in the Appendix of the Development Standards, Division 3 including, but not limited to, general landscape and irrigation notes, irrigation legend detail, typical plant list legend example, tree and shrub planting details, emitter layout and staking, bubbler, tree protection, flushing end cap, drip, spray and coupling valves, rotor/pop-up head, irrigation trench wall section, rock wall, wood and pipe bollards, approved tree, shrub, riparian and Historic District lists, pruning, tree retention/protection, root pruning and excavation adjacent to retained tree details. (Development Standards, Division 3.15)

Parking and Loading – Carson City Development Standards, Division 2

1. The number of parking spaces required for various uses are is described in the parking section of the CCMC, Division 2.2 of the Carson City Development Standards. Your site requires 79 parking spaces based on one parking space required for each five beds plus one space for every three employees. Your plan appears to have adequate parking. As discussed in the Major Project Review meeting, because there are three different employee shifts and not all employees work every shift, it may be possible to reduce the required parking spaces to less than 79 based on maximum parking required for the largest shift. This may be addressed with the Special Use Permit.
2. If the facility is used for any outpatient services for patients other than those residing onsite, additional parking spaces may be required. Please discuss these requirements with staff if the need arises.
3. Parking lots adjacent to residential uses must provide proper screening. (Development Standards, Division 2.3.1)

Architectural Design - Carson City Development Standards, Division 1

1. Proposed structures must meet the architectural standards outlined in the Development Standards, Division 1. (Development Standards, Division 1.1)
2. Variations of building details, form, line, color and materials shall be employed to create visual interest. Variations in wall planes, roof lines and direction are encouraged to prevent monotonous appearance in buildings. Large expanses of walls devoid of any articulation or embellishment shall be avoided. Similarly vertical variation in the roof line is encouraged. Mansard roofs shall wrap around the entire building. (Development Standards, Division 1.1.3)

3. All building elevations shall receive architectural treatment, except in special situations where an elevation is not visible from an adjoining property or street. (Development Standards, Division 1.1.4)
4. Exterior building colors should blend with surrounding development and not cause abrupt changes. Primary building surfaces (excluding trim areas) should be muted or earth-tone in color. Bold colors shall be avoided except when used as accent or trim. (Development Standards, Division 1.1.6)

Lighting - Carson City Development Standards, Division 1

1. All nonresidential uses shall provide lighting within public parking areas and access ways to provide safety and security. All light sources shall be located and installed in such a way as to prevent spillover lighting onto adjoining properties and glare to the sky. (Development Standards, Division 1.3.3)
2. Any lighting facilities shall be so installed as to project light downward and away from adjoining properties and glare to the sky, with the exception of accent lighting, which is limited to a maximum upward angle of 45 degrees. Site lighting trespass onto adjacent locations and the night sky shall be minimized. Covers must be installed on all lighting fixtures and lamps must not extend below the bottom of the cover. All light fixtures, except streetlights, shall be located, aimed or shielded so as to minimize stray light trespassing beyond property boundaries. (Development Standards, Division 1.3.3.1)
3. All light fixtures that are required to be shielded shall be installed in such a manner that the shielding is installed as designed. Fixtures which are International Dark Sky Association approved such as Dark Sky Friendly or equivalent with full cutoff lighting for area and wall pack fixtures are recommended. Sag, convex, drop lenses and luminaries with open bulbs are prohibited. (Development Standards, Division 1.3.3.2)
4. If elevations of buildings are proposed for accent illumination, drawings and a photometric plan shall be provided for all relevant building elevations showing the fixtures, the portions of the elevations to be illuminated, the luminance levels of the elevations and the aiming points. The maximum upward angle is 45 degrees. (Development Standards, Division 1.3.3.3)
5. Light standards, light poles and wall pack lighting adjacent to residential zones shall be limited in height as follows: Fixtures shall not exceed an overall height of 12 feet within 75 feet, 16 feet within 100 feet, 20 feet within 125 feet, 24 feet within 150 feet and 28 feet within 175 feet of property line, or center of street, whichever is closer, when adjacent to residential zones. Additional height may be permitted by the Director provided such lights are a sharp cutoff lighting system. Illumination levels at the property line of a project shall be reduced by the use of house side shields and reflectors, and shall be maintained in such a manner as to confine light rays to the premises of the project. (Development Standards, Division 1.3.3.4)
6. Parking area lights are encouraged to be greater in number, lower in height and lower in light level, as opposed to fewer in number, higher in height and higher in light level. A photometric plan is required on all projects with building size of 50,000 square feet or larger and may also be required at the discretion of the Director. (Development Standards, Division 1.3.3.6)
7. For all projects where the total initial output of the proposed lighting equals or exceed 100,000 lumen, certification that the lighting, as installed, conforms to the approved

plans shall be provided by a certified engineer before the certificate of occupancy is issued. Until this certification is submitted and reviewed, approval for use of a certificate of occupancy shall not be issued for the project. (Development Standards, Division 1.3.3.7)

8. Exterior lighting installations shall include timers, dimmers, sensors or photocell controllers that turn the lights off during daylight hours or when lighting is not needed, which will reduce unnecessary lighting, as practical. Businesses are encouraged to turn lighting down or off when businesses are not open. (Development Standards, Division 1.3.3.8)
9. Glare. Reflected glare on nearby buildings, streets or pedestrian areas shall be avoided by incorporating overhangs and awnings, using building materials and colors which are less reflective for exterior walls and roof surfaces, controlling angles of reflection and placing landscaping and screening in appropriate locations. (Development Standards, Division 1.3.3.9)
10. Luminaries which have a maximum output of 500 lumen per fixture, (equivalent to one 40-watt incandescent bulb) regardless of number of bulbs, may be left unshielded provided the fixture has an opaque top to keep light from shining directly up. Luminaries which have a maximum output of 850 lumen per fixture, (equal to one 60 watt incandescent light) regardless of number of bulbs, may be partially shielded, provided the bulb is not visible from off-site, no direct glare is produced, and the fixture has an opaque top to keep light from shining directly up. (Development Standards, Division 1.3.5.1)
11. Accent lighting. Architectural features may be illuminated by up-lighting or light directed to the building, such as wall washing, provided that the light is effectively aimed to or contained by the structure by such methods as caps, decks, canopies, marquees, signs, etc., the lamps are low intensity to produce a subtle lighting effect, and no light trespass is produced. The angle of up-lighting shall not exceed 45 degrees. Luminaries shall not be installed above the height of the parapet or roof. For national flags, statutes, public art, historic buildings or other objects of interest that cannot be illuminated with down-lighting, upward lighting may be used in the form of narrow-cone spotlighting that confines the illumination to the object of interest. (Development Standards, Division 1.3.5.2)
12. All luminaries shall be aimed and adjusted to provide illumination levels and distribution as indicated on submitted plans. All fixtures and lighting systems shall be in good working order, cleaned and maintained in a manner that serves the original design intent of the system. (Development Standards, Division 1.3.5.3)
13. Floodlights that are not full cut-off (light emitted above the fixture) may be used if permanently directed downward, not upward, and aimed at no more than a 45 degree angle, so no light is projected above the horizontal plane, and fitted with external shielding for top and side to prevent glare and off-site light trespass. Unshielded floodlights are prohibited. (Development Standards, Division 1.3.5.4)
14. Maintenance. All fixtures shall be maintained in good working order, with aiming, angles, wattage and intensity as originally approved. Replacement bulbs shall be the same or less wattage and intensity as originally approved. Fixtures and reflecting surfaces shall be cleaned on a regular schedule to reduce additional unapproved glare. (Development Standards, Division 1.3.5.10)

15. The Director may approve variations to the standards set out in this Division if variations are more appropriate to a particular site, provide an equivalent means of achieving the intent of these lighting standards and are in keeping with the purpose statement of the Development Standards. A letter of request detailing the reason for the variation and changes requested is required to be submitted to the Director. (Development Standards, Division 1.3.5.11)

Please note that exterior light fixture details must be submitted with a Building Permit application for review and approval by the Planning Division prior to installation.

Roof-Mounted Equipment - Carson City Development Standards, Division 1

1. Roof-mounted equipment (HVAC, etc.) must be screened from view from a public right-of-way or adjacent property through the use of architectural means such as parapet walls and equipment wells. The use of a picket fence or chain link slatted screening is prohibited. Show all roof-mounted equipment on the elevation plan. (Development Standards, Division 1.1.7)

Trash Storage - Carson City Development Standards, Division 1

1. Outdoor areas used for the storage of trash or refuse must be completely enclosed by a solid gate and a six foot masonry block wall and be designed to integrate with the building and site design, including colors and materials. Enclosures shall be screened with appropriate plant materials wherever possible. Provide trash enclosure construction details with the final building permit plans. (Development Standards, Division 1.2.6)
2. Trash enclosures shall be designed to meet or exceed minimum size requirements as determined by the sanitation company and shall be located to provide unobstructed access to refuse vehicles. All trash, refuse or recycled material shall be stored in containers within its walled enclosure. (Development Standards, Division 1.2.6)

Growth Management - CCMC 18.12

- Growth Management applies to all residential, commercial and industrial property that is required to be served by city water and/or sewer service within the consolidated municipality of Carson City.
- A Growth Management application is required for all commercial and industrial developments that exceed an average daily water usage of 7,500 gallons per day and may be obtained from the Planning Division. Growth Management applications are reviewed by the Planning Commission acting as the Growth Management Commission.

General Issues -

Flood Zone: A large portion of this property is located in the FEMA "AO" flood zone. Any property within a FEMA flood zone "A", "AH", "AO" or other "A" requires a flood study. For reference, the FEMA Firm Number is 320001 0092 F.

Due to changing conditions of business and requirements for zoning, master plan and development codes of Carson City, this Major Project Review information will expire and will need to be updated with a new Major Project Review if the developer has not applied for a Building Permit within one year of the date of the Major Project Review meeting.

Please note that a copy of this Major Project Review letter shall be provided with any Planning Application or Building Permit associated with this project in addition to the required plans and application checklist items.

BUILDING DIVISION

Contact Kevin Gattis, Chief Building Official

1. Commercial submittals shall show compliance with the following codes, and adopted amendments:
 - 2012 International Building Code
 - 2009 International Energy Conservation Code
 - 2012 International Fire Code
 - 2012 Uniform Mechanical Code
 - 2012 International Mechanical Code
 - 2012 Uniform Plumbing Code
 - 2011 National Electrical Code
 - 2009 ICC/ANSI A117.1 (For accessible design)
 - 2011 Northern Nevada Amendments
 - 2012 Northern Nevada Amendments
2. The project requires application for a Building Permit, issued through the Carson City Building Division. This will necessitate a complete review of the project to verify compliance with all adopted construction codes and municipal ordinances applicable to the scope of the project.
3. As a part of a submittal, provide a separate plan sheet, which clearly shows the **Accessible Route / Exit Discharge Plan**. The **Accessible Route / Exit Discharge Plan** shall have the following minimum information from the accessible entrance of the facility to the public right of way. ('12 IBC Section 1007, 1104.1 & ICC/ANSI A117.1-2009 Chapter 4 & 5):
 - Indicate accessible route surface
 - Indicate accessible route slope
 - **Indicate accessible route width** (Minimum width is 36 inches); however, if the wheelchair is near a drop or change in elevation, a guard will be required. (ICC/ANSI A117.1-2009 Section 403.5 & Table 403.5)
 - Indicate accessible route turn radius
 - Indicate all accessible ramps, with a dimensioned cross section details indicating slope & guardrails (where applicable)
 - Indicate the location and type of the detectable warning surface at curb ramps, island or cut-through medians (ICC/ANSI A117.1-2009 Sections 406.13, 406.14 & 705)
 - Indicate all accessible parking, with signage
 - Indicate location of all building and site accessible signage, with an elevation view to verify compliance with required text, height, etc.

NOTE: The **Accessible Route / Exit Discharge Plan** shall clearly show the accessible route from the accessible entrance of the facility to the accessible parking, public streets and sidewalks – as applicable to the site. ('12 IBC 1007.2, 1023.6, & 1104.1)
4. As a part of the submittal, include a complete "Architectural Design Analysis", which shall include a **complete** breakdown of the allowable area and height versus the actual area and height.

5. A Geotechnical Report will be required. The Geotechnical report for the proposed location shall include a complete assessment of the potential consequences of any liquefaction and soil strength loss, including estimation of differential settlement, lateral movement or reduction in foundation soil-bearing capacity, and shall address mitigation measures. (*2012 IBC 1803.5.12*)

ENGINEERING AND UTILITIES

Contact Rory Hogen, Assistant Engineer

1. Any engineering work done on this project must be wet stamped and signed by an engineer licensed in Nevada. This will include site, grading, utility and erosion control plans as well as standard details.
2. All construction work must be to Carson City Development Standards (CCDS) and meet the requirements of the Carson City Standard Details.
3. Fresh water must be used for Dust control. Contact Gregg Ruiz at Public Works at 283-7382 for more information.
4. A wet stamped main analysis must be submitted in accordance with CCDS 15.3.1(a) to show that adequate pressure will be delivered to the meter and fire flows meet the minimum requirements of the Carson City Fire Department. Please contact Tom Grundy, P.E. at (775) 283-7081 for fire flow test data.
5. A wet stamped sewer analysis must be submitted that includes addressing the effect of flows on the existing City system. See Section 15.3.2 of CCDS.
6. If a commercial fire line is required, the system must be designed by an engineer. The double check assembly must be above ground in a hot box, and located as close to the property line (on the private side) as possible. Please see Chapter 445A of Nevada Administrative Code.
7. A private testing agreement will be necessary for the compaction and material testing in the street right of way. The form can be obtained through Carson City Permit Engineering.
8. The domestic water service line will need a reduced pressure backflow preventer as shown in Chapter 445A of the Nevada Administrative Code.
9. The irrigation service will need a reduced pressure backflow preventer if a vacuum breaker system cannot be designed to operate properly.
10. An erosion control plan meeting Section 13 of CCDS will be required in the plan set.
11. Please show all existing water and sewer utilities, including mains in the street.
12. Any existing water and sewer services not being reused must be abandoned at the main.
13. New electrical service must be underground.
14. Please show gas and electric connections for this project.

15. A water and sewer connection fee form will be required. Please submit with the construction permit application. This should include the form, the calculations used, and any back up information.
16. Any work performed in the street right of way will require a traffic control plan and a time line type schedule to be submitted before the work can begin. A minimum of one week notice must be given before any work can begin in the street right of way.
17. A new water main connecting Mountain St. and Washington St. through this property will likely be required. Easement dedications must accompany this.
18. Most of this area is in an AO flood zone according to the latest FEMA maps. All construction must meet the latest FEMA standards for areas within the 100 year flood zone. This is considered a 2 foot flood zone, so the lowest floor elevation must be at least 4 feet higher than the adjacent highest existing ground elevation.
19. Since this is considered a change of use, all sidewalks and driveway approaches must be replaced to meet current ADA standards.

FIRE DEPARTMENT

Contact Dave Ruben, Fire Prevention Captain

1. Project must apply 2012 IFC and Northern Nevada amendments.
2. Multiple hydrants will be required for the project. The final number will depend on the type of construction used. Final location of all hydrants must be approved by CCFD. Spacing is based on 2012 IFC Appendix C.
3. Final fire flow is undetermined at this time as the Type of construction has not been determined. Use Appendix B 2012 IFC to determine fire flow. B105.2 only allows 50% reduction in flow for sprinklers as adopted locally.
4. NFPA 13 designed fire sprinkler system is required. Separate permit is required. Deferred submittal accepted.
5. NFPA 72 designed fire alarm system is required. Separate permit is required. Deferred submittal accepted.
6. No portion of the building shall be more than 600' from a fire hydrant.
7. No portion of the building shall be more than 150' from a fire access road.
8. A Knox box will be required on the east and west side of the building.
9. A shunt trip will be required for the back up generator.
10. The applicant will need to coordinate between State Health, State Fire Marshal, and CCFD for approval of fire and life safety systems. CCFD will work with applicant to allow for CCFD project review and inspection in lieu of State Fire Marshal review and inspection for construction.

HEALTH DEPARTMENT

Contact Dustin Boothe, Environmental Health Specialist

Based on the information provided for review, this facility would be licensed and inspected for

both the kitchen and the facility by the State of Nevada Bureau of Health Care Quality and Compliance. Please contact them in regards to their process for your new facility.

PARKS AND RECREATION DEPARTMENT
Contact Roger Moellendorf, Parks Director

No comments received.

PUBLIC WORKS-TRANSPORTATION
Contact Daniel Doenges, Senior Transportation Planner

No comments.

PUBLIC WORKS-ENVIRONMENTAL
Contact Mark Irwin, Environmental Control Officer

1. A properly sized gravity grease interceptor will be required for this facility per CCMC 12.06.245, Appendix 18 Division 15.5.
2. Plumbing plan showing all connections to the sanitary sewer are required.
3. Plumbing plan showing all lines connections to the grease interceptor are required. Please include the grease interceptor sizing calculations. Carson City is currently using the 2012 UPC, 702.0 Fixture Unit Equivalents & Tables 7.3, 7.4, 1014.3.6.
4. Trash enclosure will need to connect to a grease interceptor and meet all the requirements of CCMC Appendix 18 Division 15.5.
5. Excessive sewer maintenance and/or blockage might trigger the need to install a bar screen at this facility to prevent too large of solids from entering into the City's sewer system per CCMC 12.06.230, 12.06.240.
6. Garbage disposals are not allowed per CCMC 12.06.226.

The aforementioned comments are based on the Major Project Review Committee's review. If you have any questions, please feel free to contact the following members of staff, Monday through Friday 8:00 AM to 4:00 PM.
