STAFF REPORT

Agenda Item: 3E

Report To: Parks and Recreation Commission **Meeting Date:** February 4, 2020

Staff Contact: Gregg Berggren, Trails Coordinator
Dirk Goering, Senior Transportation Planner

Agenda Title: For Discussion Only: Review and discussion regarding the 70% design plans for the Kings Canyon Trailhead project funded by a Federal Lands Access Program grant.

Staff Summary: This item is to review the conceptual design for the proposed Waterfall Trailhead Parking Area, also known as the Kings Canyon Trailhead Parking Lot and provide an opportunity for the Commission to give feedback.

Agenda Action: Other/Presentation **Time Requested:** 15 minutes

Background/Issues & Analysis
On July 25, 2018, the Carson City Regional Transportation Commission (RTC), the U.S. Forest Service (USFS) and the Federal Highway Administration (FHWA) signed a Memorandum of Agreement to move forward with a Federal Land Access Program (FLAP) project to make improvements to the Kings Canyon Road. A portion of this project includes construction of a new Waterfall Trailhead Parking Area, and below is an excerpt from the agreement:

> "***Waterfall Trailhead Parking Area:*** *The parking area will be expanded for approximately 30 car parking stalls (paved), 1 ADA parking concrete pad, 2 trailer parking stalls (gravel) and a vault toilet. An existing covered kiosk and existing interpretive plaque will be relocated. The final parking lot design and capacity will be determined during preliminary design."*

Central Federal Lands (CFL) is responsible for design of the parking lot, and their initial conceptual design was presented to the Parks and Recreation Commission for review and comment on October 1, 2019. Subsequently, CFL has made some modifications to the design and they have now submitted their 70% plans for review. A copy of the 70% plans are attached. Dirk Goering, Senior Transportation Planner, is the City's lead for this project.

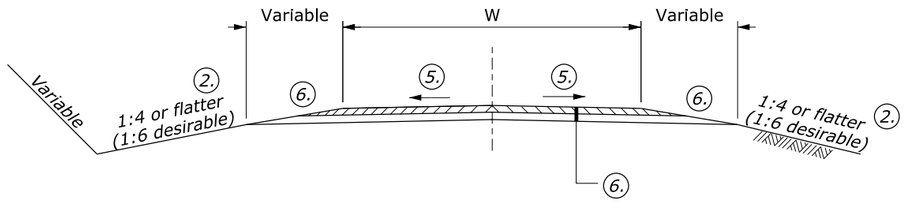
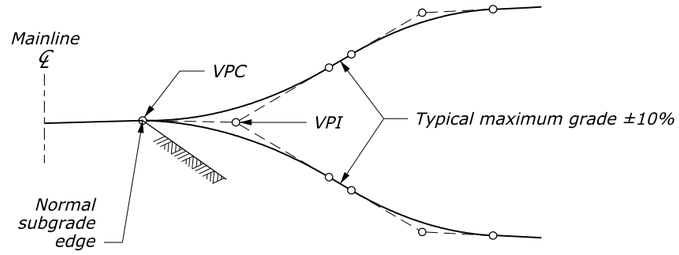
APPROACH ROAD TYPICAL PLAN



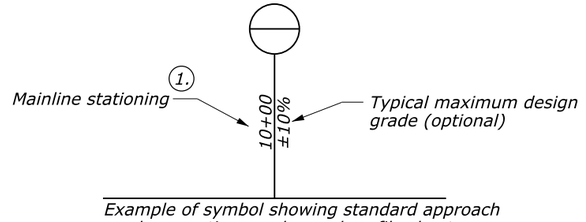
SECTION A-A



TYPICAL PROFILE

NOTE:

1. Stations shown are approximate locations. Actual locations to be field verified.
2. Construct cut and fill slopes for approach roads to match with mainline roadway construction.
3. Under special conditions, the approach road angle shown may be varied ±20°.
4. Place culverts at the end of the approach road radius to provide a flatter foreslope and increased mainline recovery area. When a culvert must be placed within the clear zone of the mainline roadway, use safety end sections (see Standard Drawing 602-9).
5. Match existing approach road cross slope.
6. Refer to mainline typical sections for structural section thicknesses and foreslopes.
7. Vary radii to fit unusual field conditions. Do not reduce existing radii or widths. R_1 is on the left side of the approach road centerline.



Example of symbol showing standard approach road connection on plan and profile sheet

NOTE:

1. Quantities based on prismodial (surface to surface) volumes.
2. Conserve 4 inches of topsoil in cut and fill slope areas. Quantities shown are finished slope quantities.
3. Unavailable material includes topsoil removed in cut areas.
4. Various backfill material generated onsite includes topsoil replacement under fills.
5. Waste quantity calculated using volumes adjusted for shrink/swell factor of 0.9.
6. The quantities shown herein are approximations. Payment will be made for the actual quantities of work performed.
7. BCY = Bank cubic yard - one cubic yard of material as it lies in the natural state.
   CCY = Compacted cubic yard - one cubic yard of material after it has been compacted to specification density.

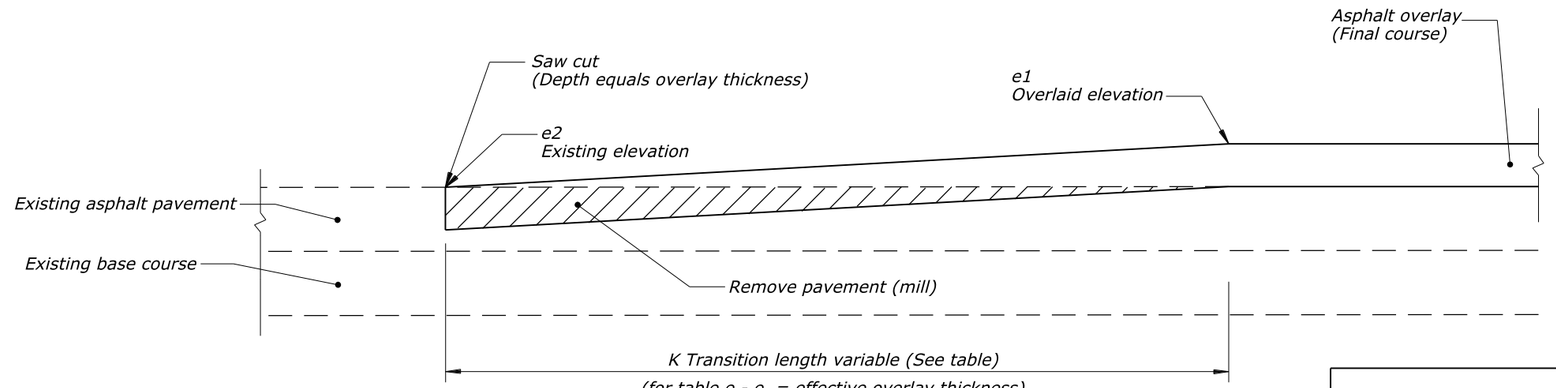
NEW PAVEMENT



OVERLAY

NOTE :

Provide a transition length in feet that is not less than the value obtained by multiplying the effective overlay thickness in inches (difference between the existing and overlaid elevations) by the K value from the Table for the posted speed of the roadway.

Use K*[e1-e2]=T, or K*[d1-d2]=T (whichever applies), to obtain the transition length.
(Minimum transition length=30 feet)

Example :
If the posted speed is 55 MPH
Effective overlay thickness = 2 inches
Then the minimum transition length =
2 inches x 42.5 ft./in. = 85 feet.

K VALUE TABLE (ft/in)

POSTED SPEED (MPH) *	30	35	40	45	50	55	60	65	70	75
K	30	32.5	35	37.5	40	42.5	45	47.5	50	52.5

* Use a K Value of 30 for speeds less than 30 MPH.

Headwalls and wingwalls Lt. & Rt.

$$$$DGN$$$$

NOTE:

1. Orient all headwalls parallel to the roadway centerline unless otherwise indicated in the plans or by the CO.
2. When pipes are on a skew, adapt and lengthen headwalls as directed.
3. Chamfer all exposed corners not rounded to ¾".
4. Quantities shown are for one headwall with pipe at right angles.
5. Construct headwalls using dimensions shown under values for 1V:1.5H slope, unless otherwise designated by the CO.

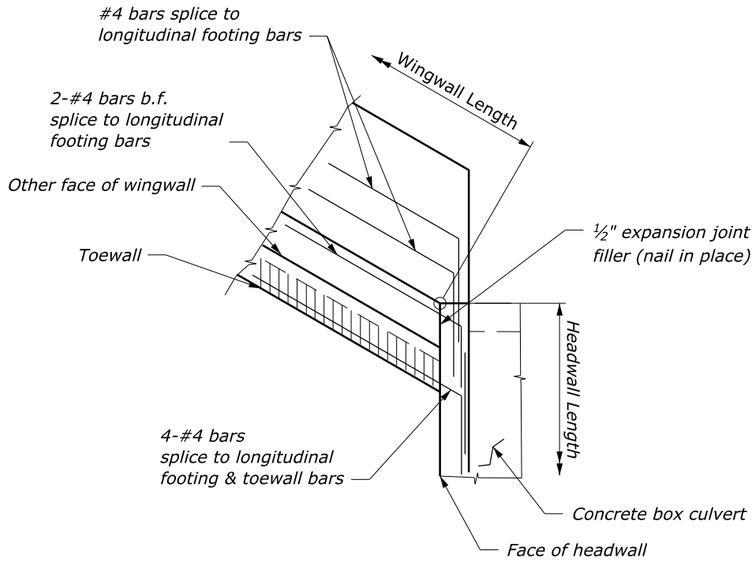
WING ELEVATION



TYPICAL HEADWALL / WINGWALL PLAN DETAIL

See Box Culvert Plan and Profile Sheet

NOTES:

1. Chamfer all exposed concrete corners ¾".
2. Expansion joint material shall conform to AASHTO M213. Payment included in the unit cost of 60103-0000, CONCRETE, HEADWALL.
3. Dimensions, elevations and angles for wingwalls and headwalls are shown on the Box Culvert Plan and Profile Sheet.
4. Use reinforcing steel meeting the requirements of AASHTO M31 or M322, Grade 60 deformed. Use a minimum concrete covering to the face of any bar of 2", unless shown otherwise on the plans.
5. Concrete will conform to Section 601 in the SCRs, with a minimum 28-day compressive strength f'c = 4000 psi.
6. Design Data:
   AASHTO LRFD Bridge Design Specifications 7th Edition, 2014 with interims through 2016. Factored bearing resistance, q_R =5.0 ksf. Lateral earth pressure equivalent to a fluid unit weight = 35 lbs. per cubic foot. Live load surcharge = equivalent height of soil, heq = 2 feet. For sliding, nominal coefficient of friction between concrete and soil = 0.65.
7. Clean all construction joints thoroughly before concrete is poured.
8. Include geocomposite sheet drains in the cost of 60103-0000, CONCRETE, HEADWALL
9. The contractor is responsible for the stability of the structure during construction.
10. Use Backfill material meeting the requirements of subsection 704.03 behind the wingwalls and headwalls. Limits are shown on the wingwall typical section.

114	24										45
120	24										40

NOTE:

1. When directed, camber pipe culverts upward from a chord through the inlet and outlet inverts an ordinate amount equal to 1% of the pipe length. Develop camber on a parabolic curve. If the midpoint elevation on the parabolic curve as designed exceeds the elevation of the inlet invert, reduce the amount of camber or increase the pipe culvert gradient.
2. Fill heights exceeding 100 feet require special analysis by the CO.
3. The fill heights in the table are for helical lockseam and welded seam pipe only. Fill heights for culvert pipe with annular corrugations are more restrictive than those of helical lockseam and welded seam pipe. Obtain approval before furnishing annular corrugation pipe.
4. Measure minimum cover from the top of the pipe culvert to the subgrade for flexible pavements, and to the top of the pavement for rigid pavements. Measure maximum fill height from the top of the pipe to the top of the pavement for both flexible and rigid pavement.

	42 to 72	49 × 33 to 83 × 57	10.5	12	
	78 to 84	-	10.5	12	10.5
3 × 1	36 to 72	60 × 46 to 81 × 59	12	14	10.5
	78 to 144	87 × 64 to 142 × 91	12	14	10.5
5 × 1	36 to 72	60 × 46 to 81 × 59	20	22	
	78 to 144	87 × 64 to 142 × 91	20	22	

[1] Fabricate annular, helical and semi-corrugated type coupling bands from the same metal as the connecting pipe. Provide coupling bands not more than 3 nominal sheet thicknesses thinner than the thickness of the pipe to be connected, and no thinner than 0.052 inch for steel or 0.048 inch for aluminum. Fasten coupling bands with the following diameter of bolt:
⅜" for 18" round culvert (21" × 15" pipe arch) or less
½" for 21" round culvert (24" × 18" pipe arch) or more

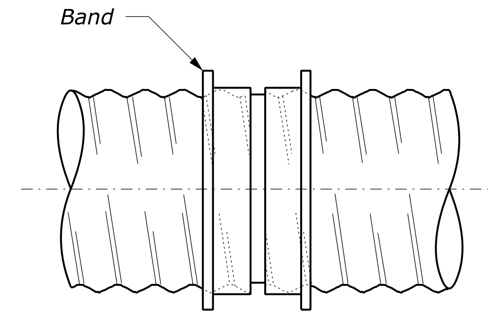
[2] For helically corrugated pipe with rerolled ends, the nominal corrugations size refers to the dimension of the end corrugation in the pipe.

[3] Use annular corrugated bands with pipes having annular corrugations or with helical pipe having rerolled end to form annular corrugations. A 10.5 inch band is acceptable on pipe ends rerolled with 2⅔" × ½" corrugations. A 12 inch band is acceptable on pipe ends rerolled with 3" × 1" pipe corrugations.

[4] Use helical corrugated bands with pipes having helically corrugated ends.

[5] The minimum band widths shown for 3" × 1" and 5" × 1" corrugated sizes apply to 2⅔" × ½" corrugations on rerolled pipe ends.

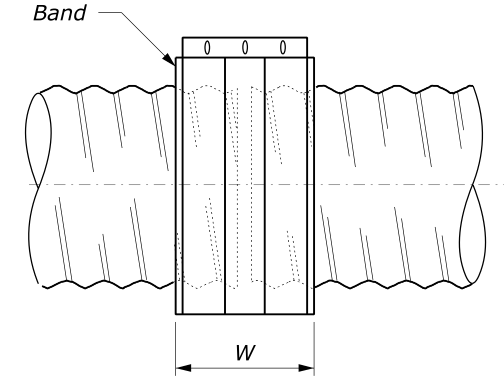
[6] Smooth sleeve-type couplers and flat bands may be used for pipe diameters of 12" or less. Use a matching metal having a nominal thickness of not less than 0.040 inch for steel, or 0.036 inch for aluminum, or a plastic with an equivalent strength to metal.



SLEEVE JOINT

Smoother sleeve with center stop.
Stab type joint

SMOOTH SLEEVE BAND



FLAT BAND

NOTE:

1. Watertight pipe joints are not required unless specified in the Special Contract Requirements.
2. Other types of coupling bands or fastening devices that comply with the joint performance criteria of AASHTO Standard specifications for Highway Bridges, Division II Section 26 may be used.

PLAN

SECTION A-A

ROUND OR PIPE ARCH CULVERT

NOTE:

1. Variations in design and dimensions are permitted to allow for manufacturer's standards.
2. Fabricate the diameter of the end section of Design B to match the inside diameter of the concrete pipe culvert.
3. Design C may be used in lieu of design A for all metal pipe culvert sizes. Coupling bands may be any acceptable type for the pipe culvert specified.
4. Fabricate multiple piece bodies with lap seams tightly joined by ⅜" rivets or bolts. Fabricate end section center panels for 60" and larger diameter pipe and equivalent pipe arch from 0.138 inch steel or 0.135 inch aluminum.
5. On end section center panels for 66" and larger equivalent pipe arch provide 2½" × 2½" × ¼" angle reinforcement bolted or riveted under the center panel seam.
6. Supplement the reinforced edges of end sections for 60" and larger diameter pipe and 66" and larger equivalent pipe arch with 2½" × 2½" × ¼" stiffener angles attached with bolts or rivets.
7. Fabricate connector section, corner plate and toe plate extensions from the same metal thickness as the panel body. Use toe plate extension where shown on the plans.
8. Warp embankment slopes to match the slope of the flared end sections.

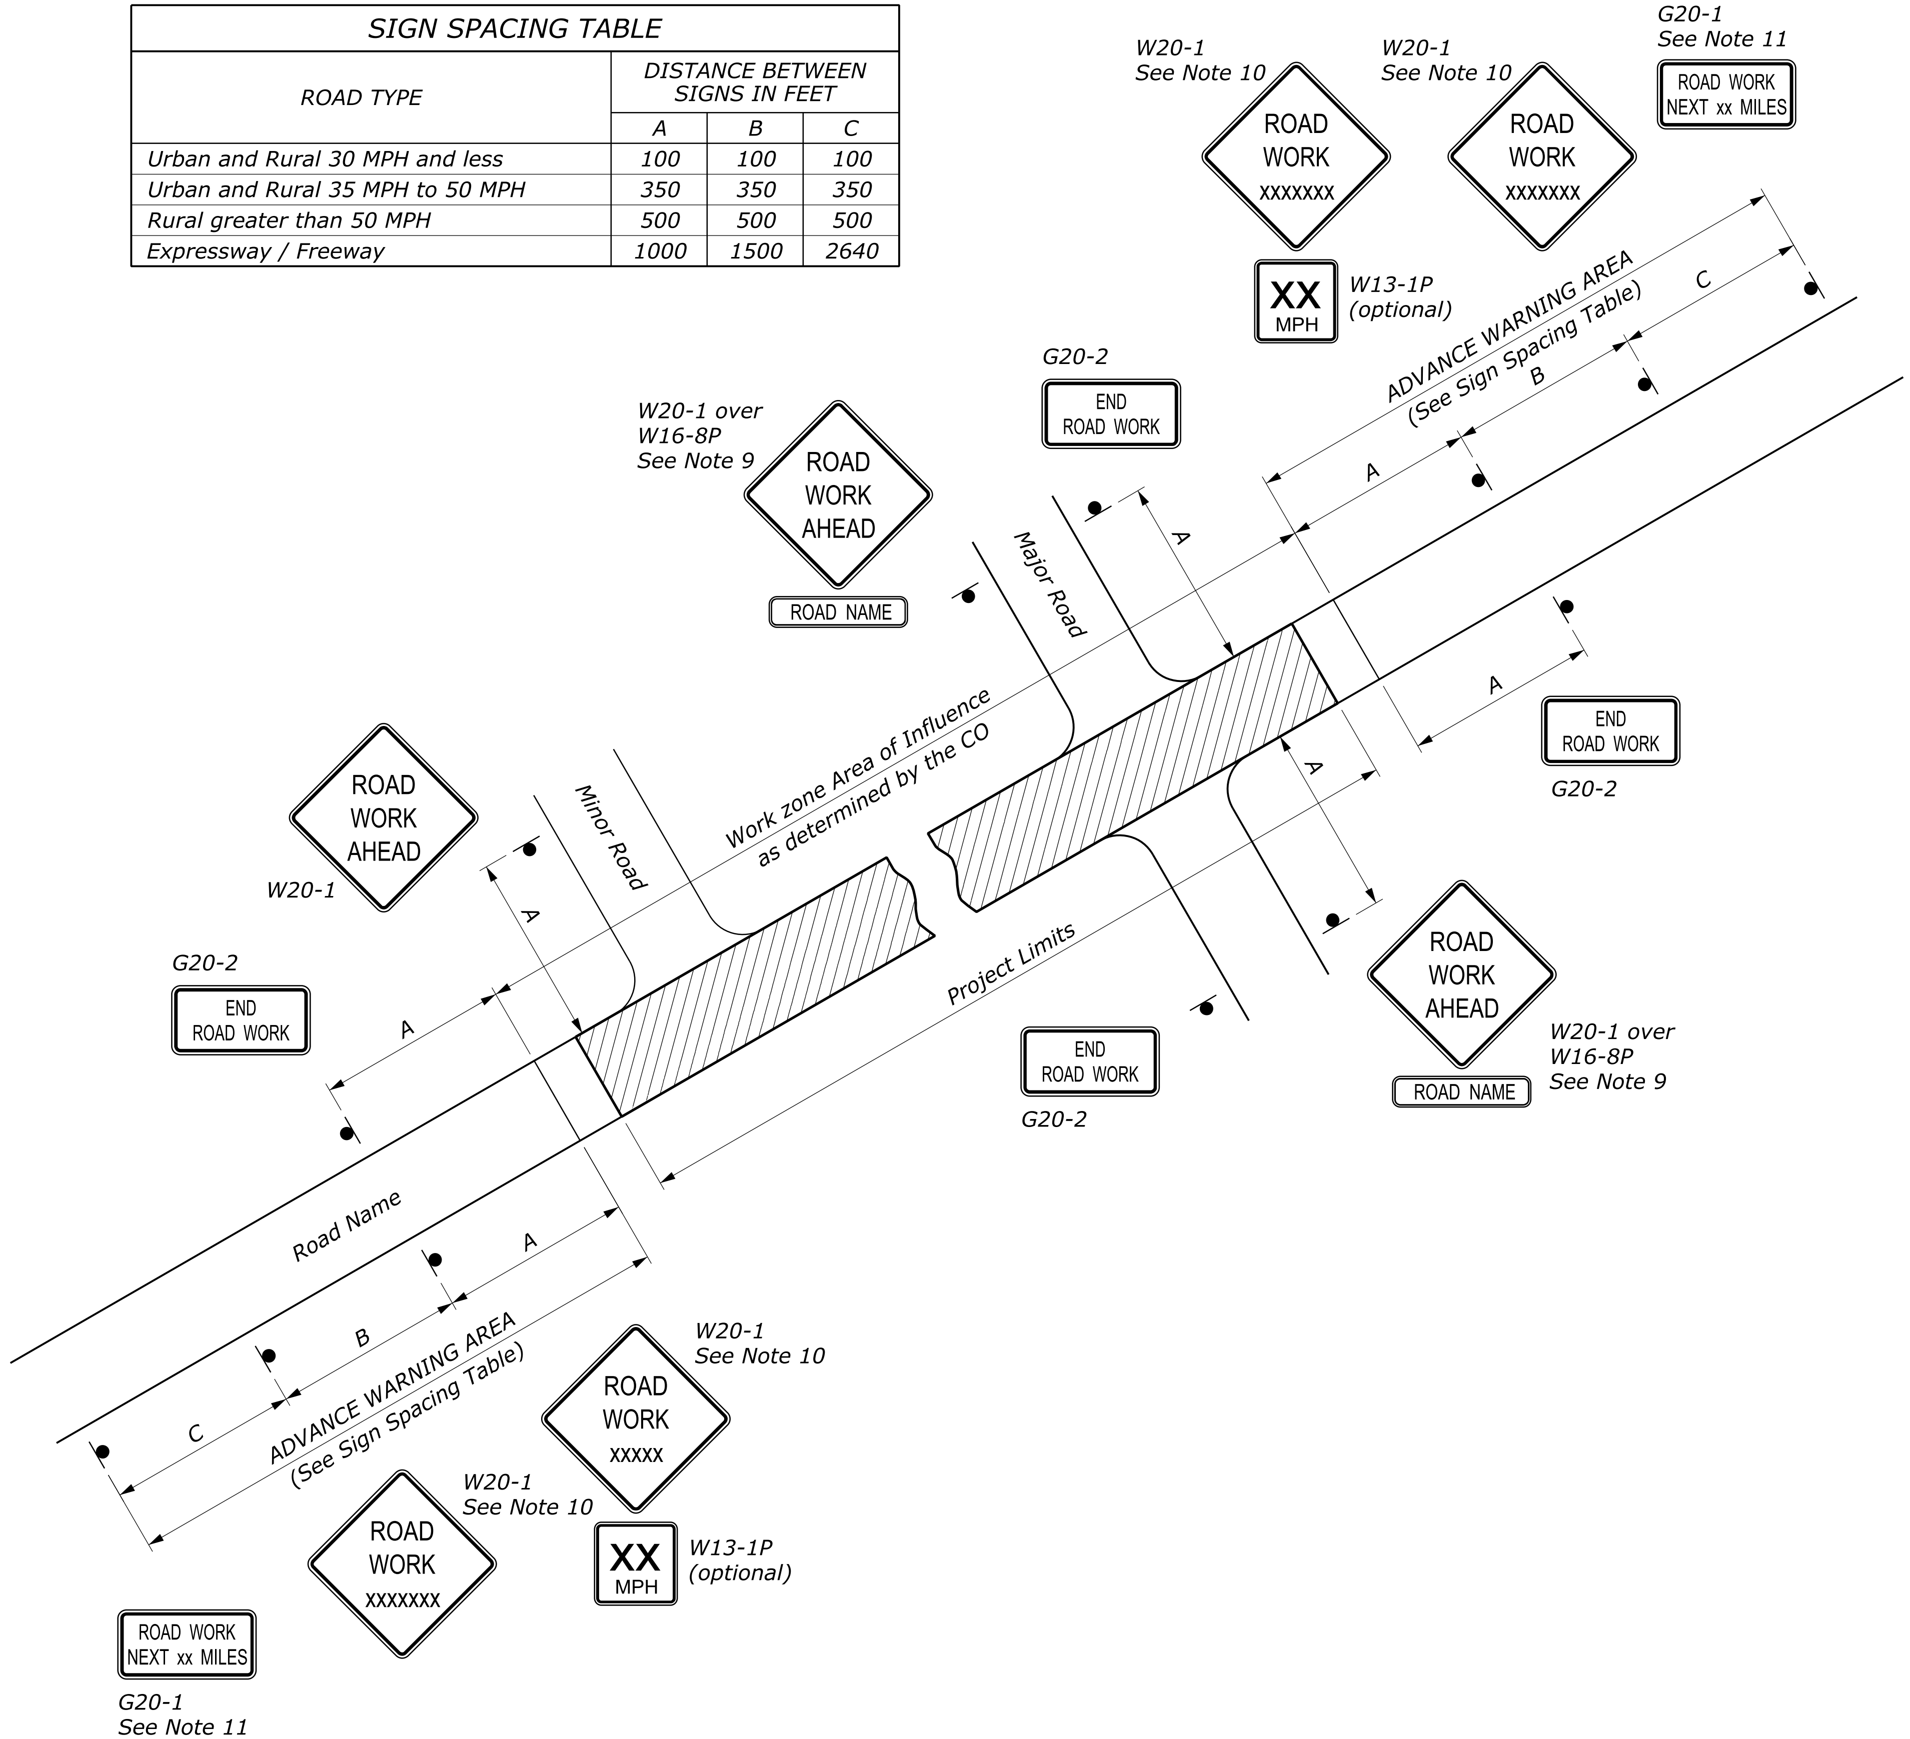
ROAD TYPE	DISTANCE BETWEEN SIGNS IN FEET		
	A	B	C
Urban and Rural 30 MPH and less	100	100	100
Urban and Rural 35 MPH to 50 MPH	350	350	350
Rural greater than 50 MPH	500	500	500
Expressway / Freeway	1000	1500	2640



NOTE:

1. Erect all project advance warning signs before starting construction work.
2. Not all details shown on the temporary traffic control sheets may be applicable to this project. The Contractor may add or delete information and details in this traffic control plan as necessary to accommodate actual operations.
3. Where advance warning signs, placed as shown, interfere with permanent signs, locate the warning signs as determined by the CO for best results. Vary messages as required.
4. Additional or different message signs may be required to fit the actual construction conditions.
5. Install advisory speed plates under the W20 series warning signs as needed to indicate a maximum recommended speed through the construction area.
6. Ensure all sign supports exposed to impact by traffic meet the requirements of NCHRP-350 or MASH for crashworthiness.
7. Maintain two-way traffic during all non-work hours except as approved by the CO.
8. Do not store traffic control devices along the roadway when not in use. Cover post-mounted signs when not applicable.
9. If W20-1 is placed on a roadway other than that on which the actual construction work occurs, include a supplementary plaque indicating the name of the road on which the construction does occur (applies to major roads only).
10. The message on the W20-1 signs may be "ROAD WORK AHEAD" or may specify the distance to the work area in feet or in miles. Install an additional W20-1 sign when approach speeds exceed 50 MPH. When used place the two W20-1 signs "B" feet apart according to the Sign Spacing Table.
11. For work zones that are 2 miles or more in length, install G20-1 signs at each end of the project. Show the distance on the G20-1 sign to the nearest whole mile.
12. If signing on a roadway under a jurisdiction other than the client agency, verify that an encroachment permit has been obtained.
13. State standards may be used as an alternative if approved by the CO.
14. Refer to the Section 635 of the Special Contract Requirements for allowable retroreflective sheeting types.

70	730	20	140	140	1:16	30

* Approach speed based on the regulatory posted speed, not the advisory speed.

NOTE:

1. Install signs and other devices for single lane closure according to Standard 635-6, 7, 8, or 9. Final location and spacing of signs and devices may be changed to fit field conditions as approved by the CO.
2. Place barrier according to the AASHTO Roadside Design Guide. Terminate barrier ends outside the work zone clear zone or protect the barrier ends with a crash cushion. Include reflectors on barrier at 25' intervals.
3. For project specific minimum width, refer to Special Contract Requirements, Section 156.
4. Place channelizing devices at downstream taper during non-work hours or when access is not needed.
5. Do not allow equipment, materials, or vehicles to be parked or stored in the buffer space.
6. Reduce or eliminate drums and barrier in downstream taper if necessary to provide access to work space.

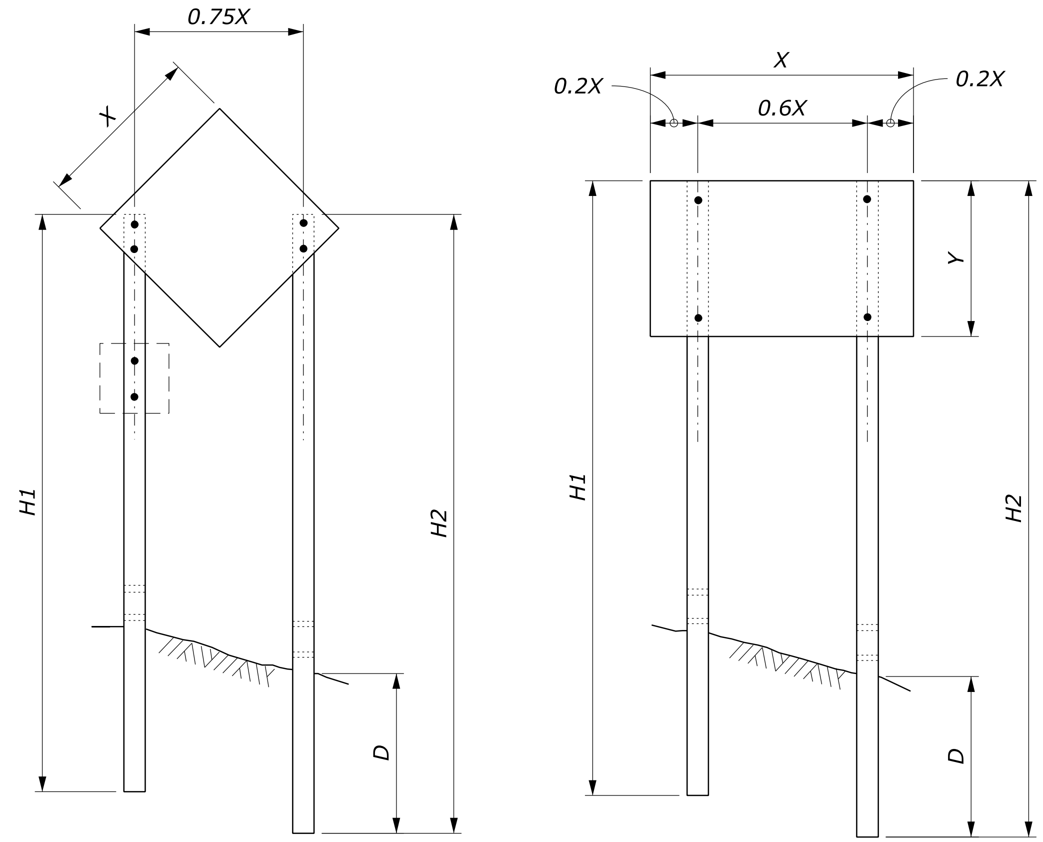
SINGLE POST SIGN



TWO POST SIGN

NOTE:

1. Attach sign panels with a minimum of 2 - ¼" dia. bolts per post.
2. H1 and H2 = Overall post length. Select post lengths to fit field conditions.
3. D = Post embedment depth for average soil conditions.
4. In areas where lateral distance is limited, a minimum lateral offset of 2' may be used. In areas with curbs, a minimum lateral distance of 1' behind the face of the curb may be used.
5. In pedestrian locations, or in areas with obstructed views, use 7' minimum mounting height for main sign and 6' minimum mounting height for secondary sign.
6. Use 7' minimum spacing between posts for sign posts 6" x 6" or larger.
7. State standards may be used as an alternative if approved by the CO.
